The wholesale partnership

A leave-behind for the May 18 meeting with ASB. Separate from the ASB audit. This document is about MVNP specifically: what the NeverRanked reseller partnership looks like for an agency, the economics, the operational fit, and the Hawaii market position available to the first agency that signs.

The opportunity

AEO (Answer Engine Optimization) is a service line every Hawaii agency will be asked to deliver inside the next twelve months. The clients are already asking. Building it in-house means hiring people who do not yet exist on the open market, buying a tool stack nobody has built, and writing a methodology nobody has tested. Reselling NeverRanked means adding a line item to next month's proposal.

MVNP keeps the client relationship. NeverRanked does the technical work. The customer never knows we exist unless MVNP chooses to tell them.

The economics

Standard 60/40 split, agency / NeverRanked. Monthly billing. No annual lock. One active client activates the reseller rate.

TIER	RETAIL / MONTH	MVNP KEEPS	NR RECEIVES	WHAT MVNP DELIVERS
Audit	$500 (reseller intro) or $750 direct, one-time	$300	$200	Hands client the audit, books a review call
Pulse	$497	$298	$199	Forwards monthly Visibility Index PDF under MVNP brand
Signal	$2,000	$1,200	$800	Forwards weekly digest under MVNP brand. Quarterly review meeting.
Amplify	$4,500	$2,700	$1,800	Forwards weekly digest + content publishing approval (capped at 6 Amplify clients globally, by design)

The audit credits toward the client's first month of any monthly tier within 30 days. Five active Signal clients nets MVNP $6,000 per month recurring. Ten active Signal clients nets MVNP $12,000 per month recurring. Each client adds 3-5 hours per month of MVNP coordination time.

How it works operationally

Lifted directly from the agency partner program documentation at neverranked.com/agencies, unchanged for MVNP:

1. **MVNP introduces.** You send us a client. We never contact them without you.
2. **NR onboards in 48 hours.** Schema, dashboard, citation tracking, scan setup, baseline. Client sees MVNP brand.
3. **NR executes the work.** Schema fixes auto-pushed to client site. Weekly citation tracking. Quarterly authority audit. Content drafts on Amplify. Everything visible in the dashboard so nothing is hidden from MVNP or from the client.

4. **MVNP forwards the Monday digest.** Plain English, forward-ready under MVNP brand. MVNP stays the account lead. MVNP bills the client at retail. NR bills MVNP at wholesale.

White-label assurance

MVNP brand on the dashboard. MVNP brand on every digest. NR never contacts the client. If a client cancels, they cancel with MVNP, not with NR, because NR was never in the room. If MVNP cancels the partnership, MVNP keeps the client. The relationship was always MVNP's.

This is documented operational practice across every agency partnership NR runs, not a promise specific to this meeting.

Hawaii vertical exclusivity (first-mover terms)

The first Hawaii agency to sign at three or more active Signal clients in a given vertical holds a 24-month lockout for that vertical, renewable.

For a small market like Hawaii, this is structurally important. Without exclusivity, two Hawaii agencies could end up competing for the same Hawaii community banking client with the same NR technical stack underneath. The lockout prevents that. The first agency in any vertical owns the vertical for the term.

Verticals where exclusivity is currently open in Hawaii:

- Community banking
- Boutique hotels and hospitality
- Law firms and professional services
- Wealth advisors and financial services
- Real estate and development
- Healthcare (when the compliance template ships)

Verticals where Hawaii Theatre is already onboarded but the vertical is not yet locked:

- Performing arts and entertainment venues

If MVNP wants the community banking vertical locked specifically, that conversation can happen at the meeting.

What MVNP commits, what NR commits

MVNP commits:

- Introducing clients via the agency partner program
- Forwarding the Monday digest under MVNP brand each week
- Quarterly review meeting with each client (call or in-person)
- Coordinating compliance review for regulated clients before schema deploys (banks, healthcare, legal)
- Billing the client at retail

NR commits:

- 48-hour onboarding per client
- Schema deployment via the snippet (no engineering on MVNP or client side)
- Six-engine citation tracking with statistical attribution at $p<0.05$
- Quarterly drift detection + automatic re-audits
- Compliance-aware Schema.org templates for financial services (pre-flighted against FDIC, NCUA, FINRA, Reg DD, Reg E, Truth in Savings, Equal Housing Lender review concerns)
- 60% of retail to MVNP, on time, monthly
- Public methodology so MVNP and the client can audit at any time at neverranked.com/state-of-aeo
- Direct founder access during onboarding and for the first 90 days per client

What NR does NOT commit:

- Marketing or creative work (MVNP's domain)
- Account strategy or campaign work (MVNP's domain)
- Customer-facing contact unless MVNP invites it

The 5-client scenario

Concrete operational picture if MVNP signs five Signal clients across the next 90 days:

- **Revenue:** $6,000 per month recurring to MVNP, beginning in the month each client onboards. After 90 days with all five active: $72,000 annualized.
- **Margin:** $6,000 is the gross. Subtract MVNP's coordination cost (roughly 15-25 hours per month across five clients, billable at MVNP's standard rate or covered inside existing retainers). Net margin depends on MVNP's hourly rate but typically 60-80% of gross stays.
- **Operational load:** five 48-hour onboardings (spread across the quarter), five Monday digests forwarded each week, five quarterly reviews. Roughly the operational shape of

one mid-sized retainer client distributed across five.

- **First-mover benefit:** if MVNP signs in any of the Hawaii verticals listed above before another agency, MVNP locks that vertical for 24 months. Any subsequent Hawaii agency cannot run the same NR stack on a competing client in that vertical.

What to do at the May 18 meeting

Three decision points for MVNP:

1. **Does the partnership shape fit MVNP's operational model?** The Monday digest forward + quarterly review fits most agency retainer rhythms. Confirming this is the meeting's primary purpose.
2. **Which Hawaii vertical does MVNP want to lock first?** Community banking is the obvious one given the ASB meeting, but MVNP may have stronger relationships in another vertical worth locking first. The lockout terms are the same regardless.
3. **What is MVNP's compliance review timeline for ASB specifically?** Banks require compliance review before any schema ships. If MVNP can broker that review process inside ASB faster than NR can navigate it directly, the partnership accelerates the ASB engagement. If MVNP cannot, ASB engages NR directly and MVNP focuses on other clients.

Either path is fine. The audit Mark is taking from this meeting is on NR regardless of which way MVNP decides.

What to read next

- `agencies/index.html` (live at neverranked.com/agencies): the full agency partner brief, including operational details and the white-label assurance
- `for-agencies/index.html` (live at neverranked.com/for-agencies): the long-form agency sales page with embedded co-branded scan tool
- `pitch/asb-hawaii/` (the ASB audit pitch): the customer-facing side of the same engagement
- `state-of-aeo/` : the live methodology, source code, weekly reports. The thing MVNP can defend in front of a client when they ask "how do you measure?"
