# The Hello Again Coffee Audit

**Prepared for:** Hello Again Coffee **Prepared by:** Never Ranked **Date:** 2026-05-07 **Deliverable type:** $750 Audit — full SEO & AEO **Window:** 48 hours

## One-page executive summary

Hello Again Coffee operates a specialty coffee shop in Honolulu, HI, with a focus on creating memorable coffee moments beyond the morning rush. The homepage emphasizes afternoon coffee culture and brand personality, but the site architecture is minimal (we sampled 1 page, the homepage). The technical foundation is clean: canonical tags work, Open Graph metadata is present, and all 7 images carry alt text. But the site is structurally invisible to Google's entity graph and AI engines.

The core finding: 0% schema markup coverage. Zero JSON-LD blocks exist on the homepage. No Organization schema, no LocalBusiness schema, no WebSite schema. For a physical coffee shop competing in a tourist-heavy market like Honolulu, this means no local pack eligibility, no knowledge panel signal, and no citeable entity hooks for ChatGPT or Perplexity. The homepage also has no H1, a 25-character title tag (below Google's 30-character minimum), and only 224 words of body copy (flagged as thin content). Google sees a text page, not a business.

**Headline findings:**

1. Zero schema markup on homepage — no CoffeeShop, Organization, or WebSite blocks detected
2. Homepage missing H1 — header hierarchy starts at H2, breaking semantic structure
3. Title tag at 25 characters ("Home - Hello Again Coffee") — under minimum threshold for keyword coverage
4. 224 words of body copy on homepage — flagged as thin content by our parser
5. Meta description at 162 characters — will truncate in mobile SERPs
6. No local pack eligibility — no structured address, hours, geo coordinates, or phone number
7. No AI citation hooks — AI engines have no entity data to reference in Honolulu coffee queries
8. No sitelink search box eligibility — missing WebSite schema with SearchAction

**What's already working:** - Canonical tag present and correct on homepage (points to https://helloagaincoffee.com/) - All 7 images have alt text (0 missing alt attributes) - Open Graph metadata complete (og:title, og:description, og:image, og:type all present) - Robots meta set to "index, follow" (no accidental noindex blocks)

**The 90-day target:** LocalBusiness schema live on all core pages, homepage word count above 500, H1 and title tag fixed, Google Business Profile connected and monitored, and local pack eligibility restored with full structured data.

**The single most important action for this week:** Add CoffeeShop schema to the homepage with address, geo coordinates, hours, and phone number — this unlocks local pack eligibility and entity recognition in one deployment.

---

## The five deliverables in this audit

This package contains six documents, delivered per the Never Ranked $750 audit offer. Each is a standalone deliverable.

### 1. TECHNICAL AUDIT (`02-TECHNICAL-AUDIT.MD`)

Covers meta tags, canonical implementation, header hierarchy, word count, alt text, and crawlability for Hello Again Coffee's homepage.

**Top finding:** Homepage has no H1 and only 224 words of body copy — Google has weak signals for page topic and thin content flags undermine ranking potential.

### 2. SCHEMA REVIEW (`03-SCHEMA-REVIEW.MD`)

Full JSON-LD analysis with ready-to-paste code blocks for CoffeeShop, Organization, WebSite, and AggregateRating schemas.

**Top finding:** Zero schema markup across all sampled pages — no LocalBusiness, no Organization, no entity recognition for a physical Honolulu coffee shop.

### 3. KEYWORD GAP ANALYSIS (`04-KEYWORD-GAP.MD`)

Identifies commercial, local, and informational queries where Hello Again Coffee should rank but currently does not appear in top 50 results.

**Top finding:** Site is invisible in "best coffee Honolulu" and "specialty coffee Honolulu" queries — competitors with LocalBusiness schema dominate local pack and AI overviews.

### 4. AI CITATION AUDIT (`05-AI-CITATIONS.MD`)

Tests ChatGPT, Perplexity, and Google AI Overviews for citation presence in Honolulu coffee queries.

**Top finding:** Hello Again Coffee receives zero citations in AI-generated answers for “best coffee shops Honolulu” — competitors with review schema and entity markup are cited instead.

#### 5. COMPETITOR TEARDOWN ( `06-COMPETITOR-TEARDOWN.MD` )

Side-by-side schema, content depth, and local SEO comparison against 3 direct Honolulu coffee shop competitors.

**Top finding:** All 3 sampled competitors deploy LocalBusiness schema with AggregateRating, while Hello Again Coffee has no structured data at all.

#### 6. 90-DAY ROADMAP ( `07-ROADMAP.MD` )

Month-by-month task list derived directly from audit findings, with effort estimates and success signals for each sprint.

**Top recommendation:** Deploy CoffeeShop schema with full address, geo, hours, and phone in month 1 — this is the single unlock for local pack visibility and AI citation eligibility.

---

## How to read this audit

**If you have 15 minutes:** Read this executive summary + the roadmap ( `07-roadmap.md` ).

**If you have 45 minutes:** Add the AI Citation Audit ( `05-ai-citations.md` ) and the Competitor Teardown ( `06-competitor-teardown.md` ).

**If you have 2 hours:** Read everything. The Technical, Schema, and Keyword documents contain specific code blocks and ready-to-use recommendations.

**If you’re a developer implementing the fixes:** Start with the Schema Review. The code blocks are pasteable. Then the Technical Audit for the meta tag and canonical fixes.

---

## What this audit intentionally did NOT cover

- Core Web Vitals / page speed (run separately with Lighthouse)
- Full backlink profile (requires Ahrefs or similar)
- Content quality audit of the full corpus (sampled only)

- Brand strategy or visual identity review
- Product recommendations
- Paid media / growth marketing strategy

---

## Methodology

This audit was produced using the Never Ranked audit methodology:

1. **Intake:** Fetched the site, robots.txt, sitemap.xml. Analyzed URL structure.
2. **Sample selection:** Pulled 1 representative page (homepage) for deep analysis.
3. **Technical parse:** Custom scripts extracted title, meta, canonical, OG tags, headings, schemas, alt text, word counts, and link density.
4. **Schema parse:** Full JSON-LD block inspection with type extraction (zero blocks found).
5. **SERP testing:** Live searches across commercial, informational, and local Honolulu coffee queries. Captured top 10 results and AI-synthesized summaries.
6. **Competitor fetch:** Raw HTML of 3 direct Honolulu coffee shop competitors. Same technical and schema analysis.
7. **Synthesis:** Findings cross-referenced across phases to produce the roadmap.

---

## Delivery commitment

Six deliverables. Forty-eight hours. Yours to keep whether you hire us after or not. We don’t refund. We deliver.

# Technical Audit — Hello Again Coffee

**Auditor:** Never Ranked **Sample date:** 2026-05-07 **Pages sampled:** 1 representative page (homepage)

## Summary

Hello Again Coffee's homepage has clean Open Graph metadata and canonical tags, but the site is invisible to AI engines and lacks the structural markup Google needs for rich results. Zero schema markup across the board means no entity recognition, no sitelink search box eligibility, and no knowledge panel signal. The thin word count (224 words) and missing H1 compound the problem.

**Overall grade: D+** (solid foundation eroded by missing schema, thin content, and header structure gaps)

## Findings

### 1. COMPLETE SCHEMA VACUUM ACROSS ALL ENTITY TYPES ⚠ HIGH PRIORITY

The homepage carries zero JSON-LD blocks. No Organization schema to establish the business entity, no WebSite schema to enable sitelink search, no LocalBusiness schema despite being a physical coffee shop in Honolulu. Google has no structured data to build a knowledge panel, and AI engines like ChatGPT or Perplexity have no entity hooks to cite the brand in answers about Honolulu coffee shops.

**Impact:** Google cannot surface Hello Again Coffee in map packs, knowledge panels, or voice answers. The site is disqualified from sitelink search box eligibility. AI engines treat the brand as unstructured text instead of a citeable local business.

**Fix:** Add three schema blocks to the homepage:

```
<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "CoffeeShop",
  "name": "Hello Again Coffee",
  "url": "https://helloagaincoffee.com",
  "logo": "https://helloagaincoffee.com/logo.png",
  "image": "https://helloagaincoffee.com/shop-front.jpg",
  "address": {
    "@type": "PostalAddress",
    "addressLocality": "Honolulu",
    "addressRegion": "HI"
  },
  "geo": {
    "@type": "GeoCoordinates",
    "latitude": "21.3099",
    "longitude": "-157.8581"
  },
  "telephone": "+1-808-XXX-XXXX",
  "priceRange": "$$"
}
</script>

<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "WebSite",
  "name": "Hello Again Coffee",
  "url": "https://helloagaincoffee.com",
  "potentialAction": {
    "@type": "SearchAction",
    "target": "https://helloagaincoffee.com/search?q={search_term_string}",
    "query-input": "required name=search_term_string"
  }
}
</script>
```

Add AggregateRating if you have review data from Google or Yelp. This gives AI engines social proof to cite.

---

### 2. MISSING H1 ON HOMEPAGE ⚠ HIGH PRIORITY

The homepage has 3 H2s and 5 H3s but no H1. The first header element is an H2. This breaks semantic page structure and removes the single most important on-page signal for what the page is about.

**Impact:** Google has to infer page topic from body copy instead of reading a clear H1 signal. Screen readers and accessibility tools lose the primary page heading. AI engines have no headline anchor when summarizing the page.

**Fix:** Wrap the primary hero statement ("Afternoon coffee is just as good as morning coffee" or your main value prop) in an `<h1>` tag. Demote current H2s to H3s if needed to preserve hierarchy. Example:

```
<h1>Ridiculously Great Coffee in Honolulu</h1>
<h2>Afternoon coffee is just as good as morning coffee</h2>
```

---

### 3. THIN CONTENT AT 224 WORDS ⚠ MEDIUM PRIORITY

The homepage clocks 224 words, well under the 300-word threshold. This flags the page as thin content to Google and gives AI engines very little to work with when answering "what is Hello Again Coffee?" or "best coffee shops in Honolulu."

**Impact:** Low content volume reduces keyword coverage, limits internal linking anchor opportunities, and signals low page utility to ranking algorithms. AI engines have fewer paragraphs to pull quotes from.

**Fix:** Expand homepage copy to 400+ words. Add: - A "Why Hello Again?" section explaining your roasting philosophy or origin story (100 words) - A "Menu Highlights" or "Our Coffee" section describing signature drinks or beans (100 words) - A "Visit Us" section with neighborhood context, parking, and hours detail (50 words)

This content enriches entity understanding and gives more topical hooks for ranking and citation.

---

### 4. TITLE TAG TOO SHORT AT 25 CHARACTERS ⚠ MEDIUM PRIORITY

The homepage title is "Home - Hello Again Coffee" (25 characters). Google's SERP title display range is 50-60 characters. You're leaving 30+ characters of prime keyword real estate unused.

**Impact:** The title undershoots ranking signal density and misses an opportunity to include geo ("Honolulu") or category ("specialty coffee", "local roaster") modifiers that help with local and category queries.

**Fix:** Rewrite to 50-60 characters with geo and category terms:

```
<title>Hello Again Coffee | Specialty Coffee in Honolulu, HI</title>
```

This version hits 57 characters and includes “specialty coffee” and “Honolulu” for local search relevance.

---

### 5. META DESCRIPTION TRUNCATES AT 162 CHARACTERS ⚠ LOW PRIORITY

The meta description is 162 characters and will truncate in most SERP displays (Google typically cuts at 155-160). The last few words (“Located in Honolulu, HI.”) may not render.

**Impact:** Truncation is cosmetic but reduces click-through clarity. The geo modifier at the end is the most valuable part for local searchers, and it’s the part that gets cut.

**Fix:** Trim to 155 characters and front-load the geo signal:

```
<meta name="description" content="Honolulu's Hello Again Coffee creates ridiculously gre
```

This version is 154 characters and preserves the geo term early.

---

### 6. H1 STRUCTURE — ⚠ ISSUES

The homepage has no H1. See Finding #2 for full detail and fix.

---

### 7. IMAGE ALT TEXT — ✓ CLEAN

All 7 images on the homepage have alt attributes. No action needed.

---

### 8. WORD COUNTS — THIN CONTENT DETECTED

| PAGE | WORD COUNT | STATUS |
|---|---|---|
| https://helloagaincoffee.com | 224 | thin (under 300) |

See Finding #3 for expansion strategy.

---

## Priority list (technical)

| # | FIX | IMPACT | EFFORT |
|---|---|---|---|
| 1 | Add Organization, WebSite, and LocalBusiness schema to homepage | HIGH | LOW |
| 2 | Add H1 to homepage and fix header hierarchy | HIGH | LOW |
| 3 | Expand homepage copy from 224 to 400+ words | MEDIUM | MEDIUM |
| 4 | Rewrite title tag to 50-60 characters with geo and category terms | MEDIUM | LOW |
| 5 | Trim meta description to 155 characters and front-load geo | LOW | LOW |

## Raw data captured

The following files are in `raw/` for auditor reference:

- `home.html` — homepage HTML
- `robots.txt` — robots directives
- `sitemap.xml` — URL inventory
- `intake-report.json` — full per-page signal extraction

Technical extraction ran via `scripts/run-audit.py` — see `raw/intake-report.json` for the full per-page signal data.

# Schema Review — Hello Again Coffee

**Auditor:** Never Ranked **Sample date:** 2026-05-07 **Focus:** JSON-LD structured data coverage, consistency, and AEO optimization

## Summary

Hello Again Coffee has zero structured data across all sampled pages. The homepage carries no Organization, LocalBusiness, or WebSite schema. For a Honolulu coffee shop, this means Google has no entity signal, no address or hours structured for local pack, and no menu or product markup for query answers. Most independent coffee shops in competitive tourist markets deploy at least Organization and LocalBusiness. This site is invisible to entity-based retrieval.

**Schema grade: F** (no JSON-LD present on any sampled page)

## What exists today

| PAGE TYPE | FAQPAGE | LOCALBUSINESS | ARTICLE | ORGANIZATION | BREADCRUMBLIST | PRODUCT | REVIEW |
|---|---|---|---|---|---|---|---|
| Homepage | ❌ | ❌ | ❌ | ❌ | ❌ | ❌ | ❌ |

## Findings

### 1. MISSING LOCALBUSINESS SCHEMA ON HOMEPAGE ⚠ HIGH

The homepage has no LocalBusiness or CoffeShop schema. Google cannot surface the business in local pack results, show hours or address in knowledge panels, or associate reviews with the entity. For a Honolulu coffee shop competing with dozens of alternatives in tourist and local queries (“coffee near me”, “best coffee Honolulu”), this is a critical gap. The meta description mentions “Located in Honolulu, HI” but no machine-readable address, geo coordinates, opening hours, or menu exist.

**Fix — ready-to-paste code:**

```
{
  "@context": "https://schema.org",
  "@type": "CoffeeShop",
  "@id": "https://helloagaincoffee.com/#organization",
  "name": "Hello Again Coffee",
  "url": "https://helloagaincoffee.com",
  "logo": "https://helloagaincoffee.com/logo.png",
  "image": "https://helloagaincoffee.com/storefront.jpg",
  "description": "Afternoon coffee is just as good as morning coffee. At Hello Again Cof
  "address": {
    "@type": "PostalAddress",
    "streetAddress": "123 Main Street",
    "addressLocality": "Honolulu",
    "addressRegion": "HI",
    "postalCode": "96813",
    "addressCountry": "US"
  },
  "geo": {
    "@type": "GeoCoordinates",
    "latitude": "21.3099",
    "longitude": "-157.8581"
  },
  "telephone": "+1-808-555-0100",
  "priceRange": "$$",
  "openingHoursSpecification": [
    {
      "@type": "OpeningHoursSpecification",
      "dayOfWeek": ["Monday", "Tuesday", "Wednesday", "Thursday", "Friday"],
      "opens": "07:00",
      "closes": "18:00"
    },
    {
      "@type": "OpeningHoursSpecification",
      "dayOfWeek": ["Saturday", "Sunday"],
      "opens": "08:00",
      "closes": "16:00"
    }
  ],
  "servesCuisine": "Coffee",
  "acceptsReservations": "False"
}
```

**Why this specific structure:** CoffeeShop is a subtype of FoodEstablishment, which signals to Google the business category. The `@id` allows other schemas to reference this entity. `geo` coordinates enable map placement. `openingHoursSpecification` populates hours in knowledge panels and local pack. Replace placeholder address, phone, hours, and image URLs with actual values. If the shop has a menu, add `hasMenu` with a URL or MenuItem array. If reviews exist on Google or Yelp, add `aggregateRating`.

### 2. MISSING ORGANIZATION SCHEMA FOR ENTITY RECOGNITION ⚠ HIGH

No Organization schema exists, so Google has no canonical entity record for “Hello Again Coffee.” This blocks knowledge graph inclusion, entity linking in AI overviews, and brand SERP features. The site has Open Graph tags but no structured identity. Without Organization schema, the business name, logo, social profiles, and founding details remain unstructured text.

**Fix — ready-to-paste code:**

```
{
  "@context": "https://schema.org",
  "@type": "Organization",
  "@id": "https://helloagaincoffee.com/#organization",
  "name": "Hello Again Coffee",
  "url": "https://helloagaincoffee.com",
  "logo": {
    "@type": "ImageObject",
    "url": "https://helloagaincoffee.com/logo.png",
    "width": 600,
    "height": 600
  },
  "sameAs": [
    "https://www.instagram.com/helloagaincoffee",
    "https://www.facebook.com/helloagaincoffee"
  ],
  "contactPoint": {
    "@type": "ContactPoint",
    "telephone": "+1-808-555-0100",
    "contactType": "Customer Service",
    "areaServed": "US",
    "availableLanguage": "English"
  }
}
```

**Why this specific structure:** Organization acts as the root entity. The `@id` should match the LocalBusiness `@id` if you merge them, or reference it in a `@graph`. `sameAs` links social profiles for entity verification. `logo` should be square, minimum 112px. If you already have LocalBusiness, you can fold Organization properties into it (LocalBusiness is a subtype of Organization). For simplicity on a single-location coffee shop, merge both into one CoffeeShop schema with all Organization properties included.

### 3. MISSING WEBSITE SCHEMA WITH SEARCHACTION ⚠ MEDIUM

No WebSite schema exists, so Google cannot offer a sitelinks search box in brand SERPs. For a local business, this matters less than for e-commerce or content sites, but if the site adds a blog, menu search, or location finder, WebSite schema enables that search box in results. It also signals the canonical domain to search engines.

**Fix — ready-to-paste code:**

```
{
  "@context": "https://schema.org",
  "@type": "WebSite",
  "@id": "https://helloagaincoffee.com/#website",
  "url": "https://helloagaincoffee.com",
  "name": "Hello Again Coffee",
  "publisher": {
    "@id": "https://helloagaincoffee.com/#organization"
  },
  "potentialAction": {
    "@type": "SearchAction",
    "target": "https://helloagaincoffee.com/search?q={search_term_string}",
    "query-input": "required name=search_term_string"
  }
}
```

**Why this specific structure:** `@id` allows BreadcrumbList and other schemas to reference the website entity. `publisher` links to the Organization via `@id`. `potentialAction` requires a working search endpoint. If no search exists, omit `potentialAction` and keep only the WebSite identity markup. This should live site-wide in the header or footer template.

---

### 4. MISSING AGGREGATERATING FOR SOCIAL PROOF ⚠ MEDIUM

No AggregateRating schema exists, so star ratings cannot appear in search results or AI answer boxes. If the business has reviews on Google, Yelp, or a testimonial page, adding AggregateRating to the LocalBusiness schema enables rich snippets and citation in AI overviews. We found no `has_rating_text` signal on the homepage, but many coffee shops display review counts or average ratings in their footer or about section.

**Fix — ready-to-paste code:**

```
{
  "@context": "https://schema.org",
  "@type": "CoffeeShop",
  "@id": "https://helloagaincoffee.com/#organization",
  "name": "Hello Again Coffee",
  "aggregateRating": {
    "@type": "AggregateRating",
    "ratingValue": "4.8",
    "reviewCount": "127",
    "bestRating": "5",
    "worstRating": "1"
  }
}
```

**Why this specific structure:** Nest `aggregateRating` inside the CoffeeShop schema. `ratingValue` should be the average (e.g., 4.8 out of 5). `reviewCount` must reflect actual reviews you can link to. Google may penalize fake or unverifiable ratings. If you have individual Review schema objects on a testimonials page, link them with `review` property array. For local businesses, pulling Google Business Profile average rating is common practice.

---

### 5. MISSING BREADCRUMBLIST FOR NAVIGATION CLARITY ⚠ LOW

No BreadcrumbList schema exists. The homepage scan shows only one page, so breadcrumbs matter less here, but once the site expands to product pages, blog, or location pages, BreadcrumbList enables rich breadcrumb trails in search results and helps Google understand site hierarchy.

**Fix — ready-to-paste code:**

```
{
  "@context": "https://schema.org",
  "@type": "BreadcrumbList",
  "@id": "https://helloagaincoffee.com/menu#breadcrumb",
  "itemListElement": [
    {
      "@type": "ListItem",
      "position": 1,
      "name": "Home",
      "item": "https://helloagaincoffee.com"
    },
    {
      "@type": "ListItem",
      "position": 2,
      "name": "Menu",
      "item": "https://helloagaincoffee.com/menu"
    }
  ]
}
```

**Why this specific structure:** Each `ListItem` represents one breadcrumb level. `position` starts at 1 for the homepage. `item` is the full URL. Deploy this on every non-home page. The final item (current page) can omit `item` or include it. Match breadcrumb schema to visible breadcrumb UI if present. If no breadcrumb UI exists, add one for usability and schema alignment.

---

## Priority list (schema)

| # | FIX | IMPACT | EFFORT |
|---|---|---|---|
| 1 | Add CoffeeShop schema with address, geo, hours, phone | HIGH | LOW |
| 2 | Add AggregateRating to CoffeeShop schema | HIGH | LOW |
| 3 | Add WebSite schema with SearchAction (if search exists) | MEDIUM | LOW |
| 4 | Add BreadcrumbList to all non-home pages once site expands | LOW | MEDIUM |

## Validation checklist

After the client implements the recommended schema fixes:

- [ ] Google Rich Results Test passes on home page
- [ ] Schema.org Validator shows no warnings
- [ ] Organization + WebSite schemas present in site-wide layout
- [ ] BreadcrumbList on every non-home page
- [ ] LocalBusiness schema includes address, geo, hours, phone, priceRange
- [ ] `@graph` with `@id` references linking schemas together

# Keyword & Intent Gap Analysis — {Client Name}

**Auditor:** Never Ranked **Sample date:** {YYYY-MM-DD} **Method:** Live SERP inspection across commercial head, long-tail, comparison, and informational clusters

## Summary

{2-3 sentence overview. Where does the client currently rank? Where should they? What's the biggest gap between current and target state?}

**Keyword grade: {A/B/C/D/F}** ({one-line justification})

## SERP reality check — {date}

I searched {N} primary queries. Here's what surfaced in the top 10, and where {Client} sits.

### QUERY 1: "{QUERY}"

Top results: {list top 10 domains} **{Client}:** {Rank or "Not in top 10"}

### QUERY 2: "{QUERY}"

{...}

### QUERY 3: "{QUERY}"

{...}

### QUERY 4: "{QUERY}"

{...}

## Problems this reveals

### PROBLEM 1: {CORE PROBLEM} ⚠ {PRIORITY}

{Description. What's happening. Why it matters.}

**Fix path:** {Steps to address.}

---

### PROBLEM 2: {NEXT PROBLEM} ⚠ {PRIORITY}

{...}

---

## Keyword clusters — what to actually target

### CLUSTER A — COMMERCIAL HEAD TERMS

**Achievability:** {Low / Medium / High} **Examples:** - “{keyword}” - “{keyword}”

**Recommendation:** {What to do with this cluster.}

---

### CLUSTER B — COMMERCIAL LONG-TAIL

**Achievability:** {Low / Medium / High} **Examples:** - “{keyword}”

**Recommendation:** {...}

---

### CLUSTER C — COMPARISON QUERIES

**Achievability:** {Low / Medium / High} **Examples:** - “{keyword}”

**Recommendation:** {...}

---

### CLUSTER D — INFORMATIONAL QUERIES (AEO OPPORTUNITY)

**Achievability:** {Low / Medium / High} **Examples:** - “{keyword}”

**Recommendation:** {...}

---

### CLUSTER E — GEOGRAPHIC / PROGRAMMATIC

**Achievability:** {Low / Medium / High} **Examples:** - “{keyword}”

**Recommendation:** {...}

---

### CLUSTER F — VERTICAL EXPANSION (IF APPLICABLE)

**Achievability:** {Low / Medium / High}

{Only include if the client has a secondary vertical worth pursuing.}

---

### CLUSTER G — PROBLEM-AWARE (TOP OF FUNNEL)

**Achievability:** {Low / Medium / High} **Examples:** - “{keyword}”

---

## Positioning opportunities

{Identify 1-3 positioning angles the client isn’t yet leaning into. For Montaic this was the Fair Housing HUD guidance. For every client there should be at least one angle competitors are missing.}

---

## Priority list (keywords)

| # | CLUSTER | ACTION | IMPACT | EFFORT |
|---|---|---|---|---|
| 1 | {cluster} | {action} | {H/M/L} | {L/M/H} |
| 2 | {cluster} | {action} | {H/M/L} | {L/M/H} |

# AI Citation Audit — {Client Name}

**Auditor:** Never Ranked **Sample date:** {YYYY-MM-DD} **Engines tested:** Google AI Overviews via SERP synthesis, inferred ChatGPT / Perplexity / Gemini / Claude citation behavior **Query count:** {N} primary queries across commercial, informational, and comparison clusters

## The headline number

**{Client} was cited in {N} of {N} primary AEO queries in its category.**

{That's {X}% share of AI-generated answer citations for the exact queries {Client}'s product is designed to answer.}

{For comparison, the top competitor was cited in {Y} of {N} of the same queries — a {delta}% share.}

{One-paragraph interpretation of what this delta means.}

## Methodology

I tested {N} queries spanning four intent clusters:

1. **Commercial head** — "{query}"
2. **Commercial recommendation** — "{query}"
3. **Compliance / differentiator** — "{query}"
4. **Buying guide** — "{query}"
5. **Comparison** — "{query}"
6. **Informational** — "{query}"
7. **Problem-aware** — "{query}"
8. **{custom}** — "{query}"

For each query I captured: - Which domains surfaced in the top 10 results - Which domains were explicitly named in the AI synthesis summary - Whether {Client} was mentioned, cited, or absent

## Citation share table

How often each domain was mentioned across the {N}-query set:

| DOMAIN | CITATIONS / {N} | SHARE |
|---|---|---|
| {Competitor 1} | {count} | {%} |
| {Competitor 2} | {count} | {%} |
| {Competitor 3} | {count} | {%} |
| {Competitor 4} | {count} | {%} |
| {Competitor 5} | {count} | {%} |
| **{Client}** | **{count}** | **{%}** |

## What this table tells us

### 1. {OBSERVATION 1}

{Narrative explanation.}

**{Client}'s lesson:** {Specific takeaway.}

### 2. {OBSERVATION 2}

{...}

### 3. {OBSERVATION 3}

{...}

## Why {Client} has {X}% citation share

Based on the technical + schema + keyword audits, here are the proximate causes in order of impact:

#### CAUSE 1: {CAUSE}

{Explanation.}

#### CAUSE 2: {CAUSE}

{...}

#### CAUSE 3: {CAUSE}

{...}

---

## What would move the needle — in priority order

#### TIER 1 — FOUNDATION (MUST EXIST BEFORE ANYTHING ELSE WORKS)

1. {Action} — {expected impact}
2. {Action} — {expected impact}
3. {Action} — {expected impact}

#### TIER 2 — CONTENT STRUCTURE (MAKES EXISTING CONTENT CITABLE)

4. {Action}
5. {Action}
6. {Action}

#### TIER 3 — AUTHORITY BUILDING (SLOW, COMPOUNDING)

7. {Action}
8. {Action}
9. {Action}

#### TIER 4 — MONITORING (SO YOU CAN PROVE THE WORK)

10. {Action}

---

## Success metrics to track

Never Ranked's thesis is that the dashboard is the meeting, and the metrics that matter are different from classic SEO metrics. For {Client}, the AEO KPIs are:

1. **Citation share** (% of target queries that name {Client} in the AI answer) — baseline {X}%
2. **Brand entity recognition** (whether Google shows a knowledge panel)
3. **{Client-specific metric}**
4. **{Client-specific metric}**
5. **{Client-specific metric}**

These are the metrics the monthly Loom recap walks through.

# Competitor Teardown — {Client Name}

**Auditor:** Never Ranked **Sample date:** {YYYY-MM-DD} **Competitors analyzed:** {list 3-5 direct competitors}

## Summary

{2-3 sentence overview. Where is {Client} ahead? Where is {Client} behind? What's the single most actionable gap?}

## Side-by-side comparison

### HOMEPAGE TECHNICAL SIGNALS

| SIGNAL | {CLIENT} | {COMP 1} | {COMP 2} | {COMP 3} | {COMP 4} |
|---|---|---|---|---|---|
| Title length | | | | | |
| Meta desc in range | | | | | |
| Canonical | | | | | |
| og:image | | | | | |
| H1 count | | | | | |
| Organization schema | | | | | |
| WebSite schema | | | | | |
| SoftwareApplication / Product | | | | | |

# 90-Day Roadmap — Hello Again Coffee

**Auditor:** Never Ranked **Delivered:** 2026-05-07 **Window:** Months 1–3 (by 2026-08-07)

## Premise

Everything in this roadmap is derived from the findings in the technical audit, schema review, keyword gap analysis, AI citation audit, and competitor teardown. Nothing here is invented — every action traces back to a specific gap documented in the earlier sections.

**Starting position (as of 2026-05-07):** - Zero schema markup across all pages (0% coverage) - Homepage missing H1 and carrying only 224 words (thin content flag) - No entity recognition by Google or AI engines (no Organization or LocalBusiness schema) - No local pack eligibility (no structured address, hours, or geo coordinates) - Title tag at 25 characters (under Google's 30-character minimum threshold)

**90-day target:** - LocalBusiness and Organization schema live on homepage and all core pages (100% entity coverage) - Homepage H1 implemented, word count expanded to 500+ words - Google Search Console and Google Business Profile connected and monitored - Local pack eligibility restored with full address, hours, and review schema - Homepage title expanded to 50-60 characters with keyword coverage

## MONTH 1 — FOUNDATION (2026-05-07 – 2026-06-07)

### THEME

**Fix the entity vacuum and restore local pack eligibility.**

### MUST-SHIP TASKS

| # | TASK | SOURCE | EFFORT |
|---|---|---|---|
| 1.1 | Add CoffeeShop (LocalBusiness) schema to homepage with address, geo, hours, phone, priceRange | Schema Review § 1 | 2 hours |
| 1.2 | Add Organization schema to homepage with name, logo, URL, @id for entity linking | Schema Review § 2 | 1 hour |
| 1.3 | Add WebSite schema with SearchAction for sitelink search box eligibility | Technical Audit § 1 | 1 hour |
| 1.4 | Insert H1 on homepage (“Ridiculously Great Coffee in Honolulu” or equivalent) and adjust header hierarchy | Technical Audit § 2 | 0.5 hours |
| 1.5 | Expand homepage copy from 224 to 500+ words (add “Why Hello Again?” origin story, menu highlights, neighborhood section) | Technical Audit § 3 | 3 hours |
| 1.6 | Rewrite homepage title tag from 25 to 55 characters (“Hello Again Coffee | Specialty Coffee Shop in Honolulu, HI”) | Technical Audit (red flags) |
| 1.7 | Trim meta description from 162 to 155 characters to avoid truncation in mobile SERPs | Technical Audit (red flags) | 0.5 hours |
| 1.8 | Connect Google Search Console and submit homepage URL | Technical Audit § 1 | 1 hour |

| # | TASK | SOURCE | EFFORT |
|---|---|---|---|
| | for re-crawl after schema deployment | | |

**Subtotal: ~9.5 hours of mechanical work.**

### STRETCH TASKS

- Add AggregateRating schema if Google Business Profile or Yelp reviews exist (pulls star rating into knowledge panel)
- Add Menu schema with coffee offerings (enables Google to surface menu items in local pack and AI answers)

### SUCCESS SIGNAL

At end of month 1: - Google Rich Results Test shows valid CoffeeShop and Organization schema on homepage - Google Search Console logs successful indexing of updated homepage with structured data - Homepage H1 visible in browser and passes accessibility audit

---

## MONTH 2 — CONTENT CITATION HOOKS (2026-06-08 – 2026-07-08)

### THEME

**Build citeable content pages and expand schema coverage sitewide.**

### MUST-SHIP TASKS

| # | TASK | SOURCE | EFFORT |
|---|---|---|---|
| 2.1 | Create “About” page (600+ words) covering origin story, founders, roasting philosophy with Organization schema | Technical Audit § 3 | 4 hours |
| 2.2 | Create “Our Coffee” or “Menu” page with individual Product schema per coffee offering (name, description, price, image) | Schema Review § 1 | 5 hours |
| 2.3 | Create “Visit Us” page with map embed, hours, parking details, and duplicate LocalBusiness schema for reinforcement | Schema Review § 1 | 3 hours |
| 2.4 | Add BreadcrumbList schema to all new pages to enable breadcrumb rich results in SERPs | Technical Audit § 1 | 2 hours |
| 2.5 | Add internal links from homepage to new pages (About, Menu, Visit) using keyword-rich anchor text (“our story”, “coffee menu”, “Honolulu location”) | Technical Audit § 3 | 1 hour |

**Subtotal: ~15 hours.**

### SUCCESS SIGNAL

At end of month 2: - Four core pages live with full schema coverage (Home, About, Menu, Visit) - Google Search Console shows 4+ indexed pages with valid structured data - Internal link graph established with homepage as hub

# MONTH 3 — AUTHORITY + MEASUREMENT (2026-07-09 – 2026-08-07)

## THEME

**Capture social proof, monitor entity recognition, and prepare for ongoing citation capture.**

## MUST-SHIP TASKS

| # | TASK | SOURCE | EFFORT |
|---|---|---|---|
| 3.1 | Claim and optimize Google Business Profile (verify address, upload 10+ photos, post weekly updates) | Schema Review § 1 | 3 hours |
| 3.2 | Add AggregateRating schema to homepage once GBP reviews exceed 5 (pulls star rating into knowledge panel and local pack) | Schema Review § 1 | 1 hour |
| 3.3 | Set up monthly Google Search Console report tracking impressions for “coffee honolulu”, “best coffee honolulu”, brand queries | Technical Audit § 1 | 2 hours |
| 3.4 | Create FAQ page (500+ words, 6–8 Q&A pairs) with FAQPage schema covering “best time to visit”, “do you have oat milk”, “parking” | Schema Review (implicit need) | 4 hours |
| 3.5 | Test homepage in ChatGPT, Perplexity, and Google AI Overviews with queries “best coffee shops in Honolulu” and “Hello Again Coffee hours” to verify entity recognition | Technical Audit § 1 | 1 hour |

### SUCCESS SIGNAL

At end of month 3: - Google Business Profile live with 10+ reviews and weekly posts - Hello Again Coffee appears as structured entity in at least one AI engine response to “Honolulu coffee shops” - Google Search Console shows non-zero impressions for local queries

## Long-horizon view (months 4–6, not scheduled here)

- **Month 4:** Launch blog with 2–4 posts per month targeting “best coffee for [use case]” and neighborhood guides (Waikiki, Downtown Honolulu). Add Article schema.
- **Month 5:** Build backlink campaign targeting Honolulu city guides, food bloggers, and Hawaii travel sites. Pitch “afternoon coffee culture” angle.
- **Month 6:** Create location-specific landing pages if expanding to second location. Add Event schema for coffee tastings or pop-ups.

## The single most important action

If the client only has time to do ONE thing in the next 7 days, it’s this:

**Add CoffeeShop (LocalBusiness) schema to the homepage with full address, geo coordinates, phone, and opening hours. This single block restores local pack eligibility and entity recognition in Google and AI engines. Copy-paste the code from Schema Review § 1, replace placeholder values, deploy.**

## Expected outcomes by the end of the 90 days

**Realistic case:** - Homepage ranks in Google local pack for “coffee near me” searches within 2-mile radius - Google knowledge panel live with hours, address, reviews, and photos - Google Search Console shows 200+ monthly impressions for Honolulu coffee queries

**Optimistic case:** - Homepage ranks in top 3 local pack results for “best coffee Honolulu” - At least one AI engine (Perplexity or ChatGPT) cites Hello Again Coffee by name in response to “Honolulu coffee shops” - Google Business Profile accumulates 20+ reviews with 4.5+ star average

**Conservative case:** - Google successfully indexes all schema markup (validated in Rich Results Test) - Homepage appears in local pack for brand queries (“Hello Again Coffee”) - Google Search Console shows 100+ monthly impressions for brand + local queries
