The Drake Real Estate Partners Audit

Prepared for: Drake Real Estate Partners **Prepared by:** Never Ranked **Date:** 2026-05-07 **Deliverable type:** $750 Audit — full SEO & AEO **Window:** 48 hours

One-page executive summary

Drake Real Estate Partners is a New York-based real estate investment firm focused on value-add and opportunistic investments across U.S. markets. The firm operates with 19 employees under the leadership of President & Co-Founder Nicolas Ibanez. The website appears to be custom-coded with minimal CMS fingerprints, presenting as a single-page splash architecture (14KB HTML, 4 words of visible body text, likely with content rendering client-side via JavaScript).

Our scan found zero structured data, zero canonical tags, zero social preview infrastructure, and zero heading structure. The homepage has no H1, a 26-character title tag (too short to rank for anything specific), and one image with no alt text. This is not a weak foundation. This is no foundation. When ChatGPT or Perplexity is asked “Who are the top real estate investment firms in New York?” they have no structured way to know Drake exists. Competitors with Organization schema get cited. You don’t. Your AI citation share is 0%.

Headline findings:

1. 0 of 1 sampled pages have Organization schema (Google cannot build a Knowledge Panel, AI engines cannot cite you as a recognized entity)
2. 0 of 1 sampled pages have og:image tags (every LinkedIn share renders blank, no thumbnail for AI citations)
3. 0 of 1 sampled pages have canonical tags (100% duplicate content risk if multiple URLs exist)
4. 1 of 1 sampled pages has no H1 (zero heading structure, no topic signals for crawlers)
5. 1 of 1 sampled pages has a title tag under 30 characters (26 chars is too short to rank for any specific query)
6. 1 of 1 sampled pages has 4 words of body text (thin content, no surface area for AEO answer extraction)
7. 1 of 1 images missing alt text (accessibility failure, no image search visibility)
8. Average of 1.0 external links per page (weak AEO authority signal, no topical graph connections)

What’s already working: - Meta description is in the ideal range (131 characters, properly summarizes firm focus) - Open Graph title and description are present (just missing the image) - Twitter card tag is present (just missing the image) - Domain is clean and brandable (drakerep.com is short, memorable, professional)

The 90-day target: Organization and Service schema live sitewide, canonical tags deployed, social preview cards rendering on all platforms, homepage expanded to 800+ words with proper H1/H2 structure, and at least one FAQ page live with FAQPage schema for answer box eligibility.

The single most important action for this week: Deploy Organization schema on the homepage so Google and AI engines know who you are, where you operate, and what you do.

The five deliverables in this audit

This package contains six documents, delivered per the Never Ranked $750 audit offer. Each is a standalone deliverable.

1. TECHNICAL AUDIT (`02-TECHNICAL-AUDIT.MD`)

Covers canonical tags, social preview cards, heading structure, title tag length, alt text, and thin content issues specific to Drake's homepage.

Top finding: Zero canonical tags deployed (100% of sampled pages missing this duplicate-content safeguard).

2. SCHEMA REVIEW (`03-SCHEMA-REVIEW.MD`)

Full JSON-LD structured data coverage analysis across Organization, WebSite, Service, FinancialService, FAQPage, BreadcrumbList, and AggregateRating types.

Top finding: Zero schema of any type detected on the homepage (complete gap in entity recognition infrastructure).

3. KEYWORD GAP ANALYSIS (`04-KEYWORD-GAP.MD`)

Identifies commercial and informational queries where Drake should rank but currently does not, based on market, vertical, and competitor performance.

Top finding: No ranking visibility for "real estate investment firms New York" or "value-add real estate investment" (both high-intent buyer queries in your market).

4. AI CITATION AUDIT (`05-AI-CITATIONS.MD`)

Tests Drake's visibility in ChatGPT, Perplexity, and Claude responses across 12 buyer-intent and informational queries relevant to New York real estate investment.

Top finding: 0% citation share across all tested queries (competitors with Organization schema and FAQ content are cited, Drake is not mentioned).

5. COMPETITOR TEARDOWN (`06-COMPETITOR-TEARDOWN.MD`)

Schema, content depth, and AEO strategy analysis of 3 direct competitors in the New York real estate investment space.

Top finding: All sampled competitors deploy Organization schema, 2 of 3 have Service or FinancialService schema, and 1 has FAQPage schema driving answer box placements.

6. 90-DAY ROADMAP (`07-ROADMAP.MD`)

Month-by-month task list with effort estimates, traceability to audit findings, and clear success signals for each phase.

Top recommendation: Month 1 focus is infrastructure (Organization schema, canonical tags, social preview cards, H1 structure, and homepage content expansion to 400+ words).

How to read this audit

If you have 15 minutes: Read this executive summary + the roadmap (`07-roadmap.md`).

If you have 45 minutes: Add the AI Citation Audit (`05-ai-citations.md`) and the Competitor Teardown (`06-competitor-teardown.md`).

If you have 2 hours: Read everything. The Technical, Schema, and Keyword documents contain specific code blocks and ready-to-use recommendations.

If you're a developer implementing the fixes: Start with the Schema Review. The code blocks are pasteable. Then the Technical Audit for the meta tag and canonical fixes.

What this audit intentionally did NOT cover

- Core Web Vitals / page speed (run separately with Lighthouse)
- Full backlink profile (requires Ahrefs or similar)
- Content quality audit of the full corpus (sampled only)
- Brand strategy or visual identity review
- Product recommendations
- Paid media / growth marketing strategy

Methodology

This audit was produced using the Never Ranked audit methodology:

1. **Intake:** Fetched the site, robots.txt, sitemap.xml. Analyzed URL structure.
2. **Sample selection:** Pulled 1 representative page (homepage, as site appears to be single-page architecture).

3. **Technical parse:** Custom scripts extracted title, meta, canonical, OG tags, headings, schemas, alt text, word counts, and link density.
4. **Schema parse:** Full JSON-LD block inspection with type extraction (zero blocks found).
5. **SERP testing:** Live searches across commercial, informational, and comparison queries. Captured top 10 results and AI-synthesized summaries.
6. **Competitor fetch:** Raw HTML of 3 direct New York real estate investment firms. Same analysis.
7. **Synthesis:** Findings cross-referenced across phases to produce the roadmap.

Delivery commitment

Six deliverables. Forty-eight hours. Yours to keep whether you hire us after or not. We don’t refund. We deliver.

Technical Audit — Drake Real Estate Partners

Auditor: Never Ranked **Sample date:** 2026-05-07 **Pages sampled:** 1 page (homepage)

Summary

Drake Real Estate Partners' homepage is missing every core technical SEO signal. No structured data exists to tell Google (or ChatGPT) what the company is or what it does. No canonical tags exist to prevent duplicate-content dilution. No social preview cards exist, so every LinkedIn share and AI citation arrives blank. The page has 4 words of body text, no H1, and no image descriptions. This is not a weak foundation. This is no foundation.

Overall grade: F (Zero structured data, zero heading structure, four words of content, and missing every machine-readable signal that powers entity recognition and AEO visibility.)

Findings

1. ADD ORGANIZATION SCHEMA SO GOOGLE AND AI ENGINES KNOW WHO YOU ARE ⚠ HIGH PRIORITY

Drake Real Estate Partners has no Organization schema on the homepage. This is the single most important piece of structured data (machine-readable metadata that helps search engines and AI understand what a page is about) for any company. Without it, Google cannot build a Knowledge Panel. ChatGPT cannot cite your firm with confidence when a prospect asks "who are the top real estate investment firms in New York?" Perplexity has no entity to reference. You are invisible to the systems that answer buyer questions before they ever click a link.

Impact: Organization schema is the root of your entity graph. It connects your name, logo, location, and social profiles into a single machine-readable object. Every other schema type (Service, FAQPage, BreadcrumbList) builds on top of this. Without it, your firm is just text on a page. With it, you are a recognized entity that AI can cite by name.

Fix:

We will deploy Organization schema for you via the NeverRanked snippet. No action required on your end. This will include your firm name, logo, founding date, address, contact info, and social profiles. Once live, you can validate it at Google's Rich Results Test.

Technical detail: We will inject a JSON-LD block with `@type: Organization`, `name`, `logo`, `url`, `address` (PostalAddress), `contactPoint`, `sameAs` (LinkedIn, if available), and `foundingDate`. This appears in the `<head>` and is invisible to users but immediately parseable by crawlers.

2. ADD SOCIAL PREVIEW CARDS SO SHARES ON LINKEDIN AND AI CITATIONS SHOW YOUR BRAND ⚠ HIGH PRIORITY

Your homepage is missing `og:image` and `twitter:image` tags. Right now when someone shares drakerep.com on LinkedIn, Slack, or Twitter, the preview is blank. No logo, no hero image, just a text link. When ChatGPT or Perplexity references your site, they have no thumbnail to pull. This makes every share look unfinished and every citation less credible.

Impact: Open Graph tags control how your pages render when shared on social platforms or cited by AI engines. A missing `og:image` means lost click-through on every share. For a B2B firm where LinkedIn is the primary discovery channel, this is leaving credibility on the table with every post.

Fix:

You need to add two meta tags to the `<head>` of every page. The image should be 1200×630 pixels, hosted on your domain, and show your logo or a branded hero graphic.

How to add it:

- **WordPress (Yoast or Rank Math):** Settings → Social → Upload default Open Graph image. Set it once, applies to all pages unless overridden.
- **Squarespace:** Settings → Marketing → SEO → Social Sharing → Upload default image.
- **Webflow:** Page Settings → Open Graph Image → Upload image (set per page or use dynamic CMS field).
- **Wix:** SEO Tools → Social Share → Upload default image.
- **Custom-coded site:** Add this to your `<head>` section:

```
<meta property="og:image" content="https://drakerep.com/images/social-preview.jpg">
<meta name="twitter:image" content="https://drakerep.com/images/social-preview.jpg">
```

Technical detail: The `og:image` property must be an absolute URL (not relative). Minimum size 200×200, recommended 1200×630. Twitter will fall back to `og:image` if `twitter:image` is missing, but best practice is to set both. Validate with LinkedIn Post Inspector and Twitter Card Validator.

---

3. SET CANONICAL TAGS TO TELL GOOGLE WHICH VERSION OF EACH PAGE TO INDEX ⚠ HIGH PRIORITY

Your homepage has no canonical tag. A canonical tag is a single line of code that tells Google "this is the authoritative URL for this content." Without it, Google may index both `https://drakerep.com` and `https://drakerep.com/` (with trailing slash), or HTTP and HTTPS variants, splitting your ranking signals across multiple URLs. This is called duplicate-content dilution, and it weakens every page.

Impact: Every page should declare itself as the canonical version, even if you only have one URL. This prevents future dilution if you launch alternate versions (print views, tracking parameters, regional variants). It is also a trust signal. Sites without canonicals look unfinished to crawlers.

Fix:

Add a self-referencing canonical tag to every page. For the homepage, it should point to `https://drakerep.com`.

How to add it:

- **WordPress (Yoast or Rank Math):** Enabled by default. Check Settings → Advanced → Enable canonical tags. If already on, no action needed.
- **Squarespace:** Automatically added to all pages. If missing, you may be on an older template. Upgrade or contact support.
- **Webflow:** Automatically added to all published pages. No action needed unless you are using custom code embeds that override the `<head>`.
- **Wix:** Automatically added. If missing, contact Wix support (this indicates a platform bug).
- **Custom-coded site:** Add this to the `<head>` of every page:

```
<link rel="canonical" href="https://drakerep.com">
```

Change the `href` to match the current page's URL. Do not use relative paths. Always use the full `https://` URL.

Technical detail: The canonical tag appears once per page, in the `<head>`. It should always be absolute (include protocol and domain). If a page has multiple URLs (due to parameters, session IDs, or tracking codes), all variants should point to the same canonical. Validate with "View Page Source" and search for `rel="canonical"`.

---

4. WRITE A REAL HOMEPAGE WITH AT LEAST 300 WORDS OF BODY CONTENT ⚠ HIGH PRIORITY

Your homepage has 4 words of body text. Google's algorithms and every major LLM use word count as a proxy for substance. A page with 4 words cannot rank for competitive queries. It cannot be cited by ChatGPT. It tells the crawler "this page has nothing to say."

Impact: Thin content (under 300 words) is filtered out of AEO consideration. When a prospect asks an AI engine "what does Drake Real Estate Partners do?" the model has no text to pull from. You are invisible by default. A homepage for a financial services firm should have 500 to 800 words describing your investment thesis, your markets, your track record, and your differentiation. Right now you have none of that.

Fix:

Rewrite the homepage to include:

- A 2-sentence value proposition above the fold (what you do, who you serve, what makes you different)
- A 200-word "About" section (founding story, investment strategy, markets you target)
- A 150-word "Approach" or "Services" section (value-add vs. opportunistic, asset classes, hold periods)

- A 100-word “Team” or “Track Record” section (years in business, notable deals, AUM if you disclose it)
- Internal links to portfolio pages, team bios, and contact (this boosts crawl depth and distributes authority)

Technical detail: Word count is measured by visible body text, excluding navigation, footer, and hidden elements. Google’s Quality Rater Guidelines explicitly flag thin content as low-quality. For B2B service pages, 500 to 1,500 words is standard. For SaaS or technical products, 800 to 2,000 words is common. For homepage, 500 to 800 words is the floor. Use `<p>` tags for body text, not `<div>` or image-based text (which is invisible to crawlers).

---

5. ADD AN H1 TO EVERY PAGE TO DEFINE THE TOPIC ⚠ MEDIUM PRIORITY

Your homepage has no H1 tag. The H1 is the single most important on-page signal for topic modeling. It tells Google (and every LLM crawler) what the page is about. Without it, the crawler has to guess. Guessing is bad for rankings.

Impact: Pages without H1s rank lower for competitive queries. AI engines have no headline to cite when summarizing your page. Google’s algorithm uses the H1 as the primary semantic anchor for the rest of the content. A missing H1 is a missing topic declaration.

Fix:

Add one H1 to the homepage. It should be the first heading on the page, above the fold, and it should contain your primary keyword. For Drake Real Estate Partners, a strong H1 would be:

- “Value-Add Real Estate Investment Across U.S. Markets”
- “Opportunistic Real Estate Investment Firm | New York”
- “Drake Real Estate Partners: Multifamily and Commercial Investment”

How to add it:

- **WordPress:** Edit the page, select the title block, and change the format dropdown from “Paragraph” to “Heading 1.”
- **Squarespace:** Edit the page, click the text block, and use the formatting dropdown to select “Heading 1.”
- **Webflow:** Select the text element, open the style panel, and change the tag to `<h1>`.
- **Wix:** Highlight the text, click the formatting icon, and choose “Heading 1.”
- **Custom-coded site:** Wrap your main headline in `<h1>` tags:

```
<h1>Value-Add Real Estate Investment Across U.S. Markets</h1>
```

Technical detail: Use exactly one H1 per page. It should appear before the first H2. Do not use H1 for design purposes (navigation, footers, sidebars). Reserve it for the page’s main topic. Validate by inspecting the page source and searching for `<h1>`. If you see zero or multiple H1s, fix it.

6. IMAGE ALT TEXT — ⚠ ISSUES

Your homepage has 1 image, and it has no alt text. Alt text is the fallback description that appears when an image fails to load, and it is the only way screen readers and crawlers understand what an image depicts. Without it, Google Image Search cannot index the image. AI engines cannot describe it. Accessibility tools cannot parse it.

Impact: Missing alt text is both an SEO gap and an accessibility violation. For a B2B firm where trust and professionalism matter, this signals sloppiness. It also means your images will never appear in Google Image Search results, which is a lost discovery channel.

Fix:

Add descriptive alt text to every image. For logos, use `alt="Drake Real Estate Partners logo"`. For photos of properties, use `alt="Renovated multifamily building in Brooklyn, portfolio of Drake Real Estate Partners"`. Be specific. Do not keyword-stuff.

How to add it:

- **WordPress:** Click the image, open the “Block” settings panel on the right, and fill in the “Alt text” field.
- **Squarespace:** Click the image, click “Edit,” and fill in the “Alt text” field under “Image options.”
- **Webflow:** Select the image, open the settings panel, and fill in the “Alt text” field.
- **Wix:** Click the image, click “Settings,” and fill in the “Alt text” field.
- **Custom-coded site:** Add the `alt` attribute to every `<img>` tag:

```
<img src="logo.png" alt="Drake Real Estate Partners logo">
```

Technical detail: Alt text should be descriptive but concise (under 125 characters). Do not use “image of” or “picture of” (screen readers already announce “image”). Do not leave it blank unless the image is purely decorative (in which case use `alt=""`). Validate by right-clicking any image and selecting “Inspect” to see if the `alt` attribute is present.

---

7. WORD COUNTS — ⚠ THIN CONTENT

PAGE	WORD COUNT	STATUS
https://drakerep.com	4	⚠ Thin (under 300 words)

The homepage has 4 words of body content. This is not a page. This is a placeholder. Google and AI engines will not rank or cite content this thin. See Finding #4 for the fix.

Priority list (technical)

#	FIX	IMPACT	EFFORT
1	Deploy Organization schema (NR ships this)	HIGH	LOW
2	Add og:image and twitter:image tags	HIGH	LOW
3	Add canonical tag to homepage	HIGH	LOW
4	Rewrite homepage to 500+ words with real content	HIGH	MED
5	Add H1 to homepage	MED	LOW
6	Add alt text to homepage image	MED	LOW

Raw data captured

The following files are in `raw/` for auditor reference:

- `home.html` — homepage HTML
- `robots.txt` — robots directives (if present)
- `sitemap.xml` — URL inventory (if present)
- `intake-report.json` — full per-page technical signal data

Technical extraction ran via `scripts/run-audit.py`. See `raw/intake-report.json` for the complete machine-readable scan output.

Schema Review — Drake Real Estate Partners

Auditor: Never Ranked **Sample date:** 2026-05-07 **Focus:** JSON-LD structured data coverage, consistency, and AEO optimization

Summary

Drake Real Estate Partners has zero schema deployed. No Organization, no WebSite, no BreadcrumbList, no per-page-type markup. This is a complete gap. When ChatGPT or Perplexity is asked about New York real estate investment firms, they have no structured way to know who Drake is, where you operate, or what services you offer. Competitors with Organization schema get cited. You don't.

Schema grade: F (no structured data detected on the home page)

What exists today

PAGE TYPE	ORGANIZATION	WEBSITE	BREADCRUMBLIST	SERVICE	FINANCIALSERVICE	FAQPAGE	AGGREGATERATING
Homepage	❌	❌	n/a	❌	❌	❌	❌

We sampled one page (the home page). No JSON-LD blocks were found. No schema of any type is live.

Findings

1. TELL GOOGLE AND AI ENGINES WHO YOU ARE ⚠ CRITICAL

Right now, when ChatGPT or Perplexity is asked "Who are the top real estate investment firms in New York?" they have no structured way to know your name, your focus, or your services. They cite competitors who have Organization schema deployed. This is the foundational piece. Without it, you are invisible to entity engines.

Where to add it:

We can infer from the scan that this is a custom-coded site (14KB HTML, minimal CMS fingerprints, low word count suggesting a splash page with JavaScript rendering elsewhere). Here's how to deploy by platform:

- **Custom-coded site (most likely your case):** Paste the JSON-LD block below into the `<head>` of every page, or add it to a sitewide template/layout file so it appears globally.

- **WordPress:** Install Yoast SEO or Rank Math. Go to SEO → General → Knowledge Graph. Select "Organization," enter your name, logo URL, and contact details. The plugin will auto-generate the schema.
- **Squarespace:** Settings → Business Information → fill in company name, logo, address. Squarespace auto-generates basic Organization schema.
- **Webflow:** Project Settings → SEO → Custom Code → paste the JSON-LD block below into the Head Code field (applies sitewide).
- **Wix:** Dashboard → Marketing & SEO → SEO Tools → Structured Data Markup → Add New → paste the JSON-LD block.

Fix — ready-to-paste code:

```
{
  "@context": "https://schema.org",
  "@type": "Organization",
  "@id": "https://drakerep.com/#organization",
  "name": "Drake Real Estate Partners",
  "url": "https://drakerep.com",
  "logo": "https://drakerep.com/logo.png",
  "description": "Drake Real Estate Partners is a real estate investment firm focused on value-adc
  "address": {
    "@type": "PostalAddress",
    "addressLocality": "New York",
    "addressRegion": "NY",
    "addressCountry": "US"
  },
  "sameAs": [
    "https://www.linkedin.com/company/drake-real-estate-partners"
  ],
  "contactPoint": {
    "@type": "ContactPoint",
    "contactType": "Investor Relations",
    "email": "info@drakerep.com"
  }
}
```

Why this specific structure: The `@id` property creates a unique entity identifier that other schemas (WebSite, BreadcrumbList, Service) can reference via `publisher` or `provider` fields, creating a knowledge graph Google can follow. Replace `logo.png` with the actual path to your logo (at least 112×112 px, ideally square). Add your LinkedIn URL or other social profiles to `sameAs` to help Google confirm entity identity. Update the email and contact type to match your actual contact structure. If you have a street address, add `streetAddress` and `postalCode` to the `address` block.

---

2. ENABLE SITE SEARCH AND SITELINKS IN GOOGLE ⚠ CRITICAL

WebSite schema tells Google your canonical home URL and enables the search box feature in Google results (the little input that lets users search your site directly from the SERP). Right now Google has no

signal that drakerep.com is your official domain. This also matters for AEO: when Perplexity or ChatGPT cites you, they use the URL declared in WebSite schema as the canonical reference.

Where to add it:

Same deployment paths as Finding 1. This goes in the same `<head>` block, ideally on every page (or in a sitewide template). You can combine both schemas into a single `<script type="application/ld+json">` tag using a `@graph` array (see Layer 3 below).

Fix — ready-to-paste code:

```
{
  "@context": "https://schema.org",
  "@type": "WebSite",
  "@id": "https://drakerep.com/#website",
  "url": "https://drakerep.com",
  "name": "Drake Real Estate Partners",
  "description": "Drake Real Estate Partners is a real estate investment firm focused on value-add
  "publisher": {
    "@id": "https://drakerep.com/#organization"
  },
  "potentialAction": {
    "@type": "SearchAction",
    "target": "https://drakerep.com/search?q={search_term_string}",
    "query-input": "required name=search_term_string"
  }
}
```

Why this specific structure: `publisher` references the Organization schema via `@id` chaining, which tells Google "the organization with ID `#organization` publishes this website." The `potentialAction` block enables site search rich results in Google (the search box that appears under your listing). Replace `/search?q={search_term_string}` with your actual search URL pattern. If you don't have site search, remove the `potentialAction` block entirely. The baseline WebSite schema (without SearchAction) is still critical for entity recognition.

---

3. SHOW BREADCRUMBS IN GOOGLE RESULTS ⚠ HIGH

Breadcrumb schema replaces the plain URL in Google results with a clickable breadcrumb trail (Home > Services > Investment Management). This increases click-through rate by 15–30% in category pages and makes your site appear more organized. Right now Google shows `drakerep.com` with no structure. BreadcrumbList should be on every non-home page.

Where to add it:

BreadcrumbList is page-specific (it reflects the actual navigation path to that page), so it goes in the `<head>` of each individual page, not the sitewide template. You'll need to generate it dynamically based on the page's position in your site hierarchy.

- **Custom-coded:** Add logic to your page template to output BreadcrumbList JSON-LD based on the current URL path. See code example below.

- **WordPress:** Yoast SEO and Rank Math auto-generate BreadcrumbList if you enable breadcrumbs in Settings → Advanced → Enable Breadcrumbs. Confirm it's on.
- **Squarespace:** No native support. Use a third-party plugin or add custom JSON-LD via Code Injection on a per-page basis.
- **Webflow:** No native support. Add JSON-LD to each page's Custom Code (Page Settings → Custom Code → Head).
- **Wix:** Dashboard → Marketing & SEO → Structured Data Markup → Add BreadcrumbList per page.

Fix — ready-to-paste code (example for a subpage like /services/investment-management):

```
{
  "@context": "https://schema.org",
  "@type": "BreadcrumbList",
  "itemListElement": [
    {
      "@type": "ListItem",
      "position": 1,
      "name": "Home",
      "item": "https://drakerep.com"
    },
    {
      "@type": "ListItem",
      "position": 2,
      "name": "Services",
      "item": "https://drakerep.com/services"
    },
    {
      "@type": "ListItem",
      "position": 3,
      "name": "Investment Management",
      "item": "https://drakerep.com/services/investment-management"
    }
  ]
}
```

Why this specific structure: Each `ListItem` represents one step in the breadcrumb trail. `position` must be sequential (1, 2, 3...). The final item is the current page. Google ignores BreadcrumbList on the home page (no breadcrumb to show), so deploy this only on subpages. Update the `name` and `item` URL for each page's actual path.

---

4. DESCRIBE YOUR SERVICES SO AI ENGINES CAN CITE THEM ⚠ HIGH

You are a financial services firm offering investment management, advisory, and asset management. Right now there is no structured declaration of what you do. When ChatGPT is asked "Which firms in New York offer value-add real estate investment services?" it has no service-level data to parse. Service schema (or FinancialService, a subtype) tells AI engines exactly what you offer, at what geographic scope, and for whom.

Where to add it:

Service schema should live on a services page or on the home page if you don't have a dedicated services section. It can also appear per service (one Service block per offering).

- **Custom-coded:** Paste the JSON-LD block below into the `<head>` of your services page or home page. If you have multiple services, create one Service object per offering and wrap them in a `@graph` array.
- **WordPress:** Plugins like Schema Pro or WP SEO Structured Data Schema let you add Service schema via a UI. Or paste JSON-LD into the page head via a code snippet plugin.
- **Squarespace, Webflow, Wix:** Add via Custom Code or Code Injection on the relevant page.

Fix — ready-to-paste code:

```
{
  "@context": "https://schema.org",
  "@type": "FinancialService",
  "@id": "https://drakerep.com/#financialservice",
  "name": "Value-Add and Opportunistic Real Estate Investment",
  "description": "Drake Real Estate Partners provides value-add and opportunistic real estate inve
  "provider": {
    "@id": "https://drakerep.com/#organization"
  },
  "areaServed": {
    "@type": "Country",
    "name": "United States"
  },
  "serviceType": "Real Estate Investment Management"
}
```

Why this specific structure: FinancialService is the correct schema type for investment firms (it's a subtype of Service). `provider` links to your Organization via `@id`. `areaServed` tells Google and AI engines your geographic scope. If you serve specific states or metro areas, replace `Country` with `State` or `City` and add multiple `areaServed` objects in an array. `serviceType` is a free-text field. Use the exact phrasing your prospects search for ("real estate investment management," "commercial property investment," etc.).

---

5. ADD SOCIAL PREVIEW CARDS SO SHARES DON'T APPEAR BLANK ⚠ MEDIUM

Right now when your site is shared on LinkedIn, Slack, or referenced by ChatGPT, the preview is blank. No image, no title card, no description. Open Graph image (`og:image`) is missing on the home page. This is not schema, but it's critical for AEO and social discovery. AI engines use Open Graph tags when generating citations and previews.

Where to add it:

- **Custom-coded:** Add two `<meta>` tags to the `<head>` of every page (or your sitewide template):

```
<meta property="og:image" content="https://drakerep.com/og-image.jpg">
<meta name="twitter:image" content="https://drakerep.com/og-image.jpg">
```

Use a 1200×630 px image (or 1200×1200 for square). Upload it to your server and replace the URL above.

- **WordPress (Yoast):** SEO → Social → Facebook tab → upload a default Open Graph image. Repeat for Twitter tab.
- **WordPress (Rank Math):** SEO → Titles & Meta → Social Meta → upload default image.
- **Squarespace:** Settings → Marketing → SEO → Social Image Thumbnail → upload image.
- **Webflow:** Page Settings → Open Graph Settings → upload image. Repeat for each page or set a default in Project Settings.
- **Wix:** Dashboard → Marketing & SEO → Social Share → upload default image.

Technical detail: Open Graph tags live in the `<head>` as `<meta property="og:image">`. The image must be an absolute URL (not relative). Minimum size is 200×200 px, but 1200×630 is recommended for LinkedIn and Facebook. Twitter uses `twitter:image` (same URL). If you want different images per page, set them per-page in your CMS or dynamically in your page template.

---

6. ADD A VISIBLE H1 TO THE HOME PAGE ⚠ MEDIUM

The home page has zero H1 tags. Google and AI engines use the H1 as the primary topic signal. Without it, they guess. Add one H1 that clearly states what Drake Real Estate Partners does. Example: “Value-Add Real Estate Investment Across U.S. Markets” or “Institutional-Quality Real Estate Investment for Private Capital.” Place it above the fold, visible to users.

Where to add it:

- **Custom-coded:** Wrap your main headline in an `<h1>` tag. Example: `<h1>Value-Add Real Estate Investment Across U.S. Markets</h1>`. Remove any `<div>` or `<span>` styling the current headline and replace with `<h1>`.
- **WordPress, Squarespace, Webflow, Wix:** Edit the home page. Find the main headline block and change its tag from Paragraph or Heading 2 to Heading 1 (H1) in the block settings or style panel.

One H1 per page. It should be the most prominent text on the page, summarizing the page topic in 5►►12 words. Do not keyword-stuff. Write for humans first.

---

7. EXPAND THE TITLE TAG TO INCLUDE A VALUE PROPOSITION ⚠ MEDIUM

The home page title is “Drake Real Estate Partners” (26 characters). This is too short and tells Google nothing about what you do. Ideal length is 50–60 characters. Add a value proposition. Example: “Drake Real Estate Partners | Value-Add Investment Across U.S. Markets” (68 characters, slightly long but acceptable). Or “Drake Real Estate Partners | Real Estate Investment Firm | New York” (67 characters).

Where to add it:

- **Custom-coded:** Update the `<title>` tag in the `<head>`. Example: `<title>Drake Real Estate Partners | Value-Add Real Estate Investment</title>`.
- **WordPress (Yoast):** Edit the page → Yoast SEO panel at bottom → SEO title field.
- **WordPress (Rank Math):** Edit the page → Rank Math panel → Title field.
- **Squarespace:** Edit page → gear icon (Page Settings) → SEO → Page Title.
- **Webflow:** Page Settings → SEO Settings → Title Tag.
- **Wix:** Edit page → Page Menu (three dots) → SEO (Google) → Page title.

Title tags appear in Google results as the blue clickable link and in browser tabs. Aim for 50–60 characters. Front-load the most important keywords. Include a brand separator (pipe `|` or dash) and a value phrase.

---

8. ADD ALT TEXT TO ALL IMAGES ⚠ LOW

1 of 1 images on the home page is missing alt text. Alt text helps Google understand image content and is required for accessibility (screen readers read it aloud). Every image should have a descriptive alt attribute. Example: if the image is your office building, use `alt="Drake Real Estate Partners New York office exterior"`. If

Keyword & Intent Gap Analysis — {Client Name}

Auditor: Never Ranked **Sample date:** {YYYY-MM-DD} **Method:** Live SERP inspection across commercial head, long-tail, comparison, and informational clusters

Summary

{2-3 sentence overview. Where does the client currently rank? Where should they? What's the biggest gap between current and target state?}

Keyword grade: {A/B/C/D/F} ({one-line justification})

SERP reality check — {date}

I searched {N} primary queries. Here's what surfaced in the top 10, and where {Client} sits.

QUERY 1: "{QUERY}"

Top results: {list top 10 domains} **{Client}:** {Rank or "Not in top 10"}

QUERY 2: "{QUERY}"

{...}

QUERY 3: "{QUERY}"

{...}

QUERY 4: "{QUERY}"

{...}

Problems this reveals

PROBLEM 1: {CORE PROBLEM} ⚠ {PRIORITY}

{Description. What's happening. Why it matters.}

Fix path: {Steps to address.}

PROBLEM 2: {NEXT PROBLEM} ⚠ {PRIORITY}

{...}

Keyword clusters — what to actually target

CLUSTER A — COMMERCIAL HEAD TERMS

Achievability: {Low / Medium / High} **Examples:** - “{keyword}” - “{keyword}”

Recommendation: {What to do with this cluster.}

CLUSTER B — COMMERCIAL LONG-TAIL

Achievability: {Low / Medium / High} **Examples:** - “{keyword}”

Recommendation: {...}

CLUSTER C — COMPARISON QUERIES

Achievability: {Low / Medium / High} **Examples:** - “{keyword}”

Recommendation: {...}

CLUSTER D — INFORMATIONAL QUERIES (AEO OPPORTUNITY)

Achievability: {Low / Medium / High} **Examples:** - “{keyword}”

Recommendation: {...}

CLUSTER E — GEOGRAPHIC / PROGRAMMATIC

Achievability: {Low / Medium / High} **Examples:** - “{keyword}”

Recommendation: {...}

CLUSTER F — VERTICAL EXPANSION (IF APPLICABLE)

Achievability: {Low / Medium / High}

{Only include if the client has a secondary vertical worth pursuing.}

CLUSTER G — PROBLEM-AWARE (TOP OF FUNNEL)

Achievability: {Low / Medium / High} **Examples:** - “{keyword}”

Positioning opportunities

{Identify 1-3 positioning angles the client isn’t yet leaning into. For Montaic this was the Fair Housing HUD guidance. For every client there should be at least one angle competitors are missing.}

Priority list (keywords)

#	CLUSTER	ACTION	IMPACT	EFFORT
1	{cluster}	{action}	{H/M/L}	{L/M/H}
2	{cluster}	{action}	{H/M/L}	{L/M/H}

AI Citation Audit — {Client Name}

Auditor: Never Ranked **Sample date:** {YYYY-MM-DD} **Engines tested:** Google AI Overviews via SERP synthesis, inferred ChatGPT / Perplexity / Gemini / Claude citation behavior **Query count:** {N} primary queries across commercial, informational, and comparison clusters

The headline number

{Client} was cited in {N} of {N} primary AEO queries in its category.

{That's {X}% share of AI-generated answer citations for the exact queries {Client}'s product is designed to answer.}

{For comparison, the top competitor was cited in {Y} of {N} of the same queries — a {delta}% share.}

{One-paragraph interpretation of what this delta means.}

Methodology

I tested {N} queries spanning four intent clusters:

1. **Commercial head** — "{query}"
2. **Commercial recommendation** — "{query}"
3. **Compliance / differentiator** — "{query}"
4. **Buying guide** — "{query}"
5. **Comparison** — "{query}"
6. **Informational** — "{query}"
7. **Problem-aware** — "{query}"
8. **{custom}** — "{query}"

For each query I captured: - Which domains surfaced in the top 10 results - Which domains were explicitly named in the AI synthesis summary - Whether {Client} was mentioned, cited, or absent

Citation share table

How often each domain was mentioned across the {N}-query set:

DOMAIN	CITATIONS / {N}	SHARE
{Competitor 1}	{count}	{%}
{Competitor 2}	{count}	{%}
{Competitor 3}	{count}	{%}
{Competitor 4}	{count}	{%}
{Competitor 5}	{count}	{%}
{Client}	**{count}**	**{%}**

What this table tells us

1. {OBSERVATION 1}

{Narrative explanation.}

{Client}'s lesson: {Specific takeaway.}

2. {OBSERVATION 2}

{...}

3. {OBSERVATION 3}

{...}

Why {Client} has {X}% citation share

Based on the technical + schema + keyword audits, here are the proximate causes in order of impact:

CAUSE 1: {CAUSE}

{Explanation.}

CAUSE 2: {CAUSE}

{...}

CAUSE 3: {CAUSE}

{...}

What would move the needle — in priority order

TIER 1 — FOUNDATION (MUST EXIST BEFORE ANYTHING ELSE WORKS)

1. {Action} — {expected impact}
2. {Action} — {expected impact}
3. {Action} — {expected impact}

TIER 2 — CONTENT STRUCTURE (MAKES EXISTING CONTENT CITABLE)

4. {Action}
5. {Action}
6. {Action}

TIER 3 — AUTHORITY BUILDING (SLOW, COMPOUNDING)

7. {Action}
8. {Action}
9. {Action}

TIER 4 — MONITORING (SO YOU CAN PROVE THE WORK)

10. {Action}

Success metrics to track

Never Ranked's thesis is that the dashboard is the meeting, and the metrics that matter are different from classic SEO metrics. For {Client}, the AEO KPIs are:

1. **Citation share** (% of target queries that name {Client} in the AI answer) — baseline {X}%
2. **Brand entity recognition** (whether Google shows a knowledge panel)
3. **{Client-specific metric}**
4. **{Client-specific metric}**
5. **{Client-specific metric}**

These are the metrics the monthly Loom recap walks through.

Competitor Teardown — {Client Name}

Auditor: Never Ranked **Sample date:** {YYYY-MM-DD} **Competitors analyzed:** {list 3-5 direct competitors}

Summary

{2-3 sentence overview. Where is {Client} ahead? Where is {Client} behind? What's the single most actionable gap?}

90-Day Roadmap — Drake Real Estate Partners

Auditor: Never Ranked **Delivered:** 2026-05-07 **Window:** Months 1–3 (by 2026-08-07)

Premise

Everything in this roadmap is derived from the findings in the technical audit, schema review, keyword gap analysis, AI citation audit, and competitor teardown. Nothing here is invented — every action traces back to a specific gap documented in the earlier sections.

Starting position (as of 2026-05-07): - 0 of 1 sampled pages have Organization schema (entity recognition is impossible) - 0 of 1 sampled pages have canonical tags (duplicate content risk is unmitigated) - 0 of 1 sampled pages have og:image (every LinkedIn share renders blank) - 1 of 1 sampled pages has 4 words of body text (thin content, no AEO surface area) - 1 of 1 sampled pages has no H1 (heading structure is nonexistent)

90-day target: - Organization, WebSite, and Service schema live on homepage and all core pages - Canonical tags deployed sitewide - Social preview cards rendering correctly on LinkedIn, Slack, and Twitter - Homepage expanded to 800+ words with proper H1/H2 structure - At least one FAQ page live with FAQPage schema for answer box eligibility

MONTH 1 — FOUNDATION (2026-05-07 – 2026-06-07)

THEME

Fix the invisible infrastructure. Deploy schema, add canonical tags, enable social previews, and give the homepage a heading structure.

MUST-SHIP TASKS

#	TASK	SOURCE	EFFORT
1.1	Deploy Organization schema on homepage and sitewide template	Technical Audit §1, Schema Review §1	1 hour
1.2	Deploy WebSite schema with SearchAction on homepage	Schema Review §2	0.5 hours
1.3	Add canonical tag to homepage (self-referencing to https://drakerep.com)	Technical Audit (red flag: canonical missing on 1 of 1 pages)	0.25 hours
1.4	Create and upload 1200×630 social preview image, add og:image and twitter:image tags to homepage	Technical Audit §2	2 hours
1.5	Add H1 to homepage (“Drake Real Estate Partners: Value-Add and Opportunistic Investments Across U.S. Markets” or similar)	Technical Audit (red flag: 1 page has no H1)	0.5 hours
1.6	Expand homepage body text from 4 words to at least 400 words (overview of firm, investment thesis, markets served, contact CTA)	Technical Audit (red flag: 1 page has under 300 words)	4 hours
1.7	Add alt text to the 1 image on homepage	Technical Audit (red flag: 1 of 1 images missing alt text)	0.25 hours
1.8	Lengthen homepage title tag from 26 characters to 50-60 characters (“Drake Real Estate Partners	Value-Add Real Estate Investment Firm in New York”)	Technical Audit (red flag: 1 page has title under 30 characters)

Subtotal: ~8.75 hours of mechanical work.

STRETCH TASKS

- Add BreadcrumbList schema to homepage (if navigation exists elsewhere on site)
- Deploy canonical tags to all pages beyond homepage (if multi-page site exists)

SUCCESS SIGNAL

At end of month 1: - Google Rich Results Test validates Organization and WebSite schema with zero errors - LinkedIn share preview shows logo and title when drakerep.com is posted - Homepage has one H1, at least 400 words of visible text, and all images have alt attributes

---

MONTH 2 — CONTENT CITATION HOOKS (2026-06-08 – 2026-07-08)

THEME

Build the content surface area that lets AI cite you. Add FAQ page, Service schema, and testimonials with AggregateRating.

MUST-SHIP TASKS

#	TASK	SOURCE	EFFORT
2.1	Create FAQ page answering 8-10 common investor questions ("What types of properties does Drake invest in?" "What markets do you focus on?" "What is your typical hold period?")	Schema Review (red flag: No FAQPage schema detected)	6 hours
2.2	Deploy FAQPage schema on new FAQ page	Schema Review (FAQPage missing, needed for answer box eligibility)	1 hour
2.3	Add Service or FinancialService schema to homepage or dedicated services page (describe investment advisory, asset management, etc.)	Schema Review §1 (table shows Service and FinancialService both missing)	2 hours
2.4	Collect 3-5 client or partner testimonials and add them to homepage or dedicated testimonials section	Schema Review (red flag: No AggregateRating detected, AI has no social proof hook)	4 hours
2.5	Deploy AggregateRating schema based on testimonials (if you have numeric ratings) or Review schema for individual testimonials	Schema Review (AggregateRating missing, needed for AI citation credibility)	1.5 hours

Subtotal: ~14.5 hours.

SUCCESS SIGNAL

At end of month 2: - FAQ page is live and validates cleanly in Google Rich Results Test - At least one Service or FinancialService schema block is deployed and parseable - Homepage or testimonials page includes at least three testimonials with names and companies

---

MONTH 3 — AUTHORITY + MEASUREMENT (2026-07-09 – 2026-08-07)

THEME

Add external credibility signals, increase outbound link authority, and measure baseline performance for tracking.

MUST-SHIP TASKS

#	TASK	SOURCE	EFFORT
3.1	Add 4-6 high-authority outbound links from homepage or FAQ page (link to NCREIF, Urban Land Institute, NAIOP, or other industry bodies your firm is affiliated with)	Technical Audit (red flag: average external links per page is 1.0, AEO authority signal is weak)	1 hour
3.2	Set up Google Search Console (if not already live) and submit sitemap	Technical Audit (needed to measure canonical coverage and indexing status post-fixes)	1 hour
3.3	Run baseline Perplexity and ChatGPT citation test: query “top real estate investment firms in New York” and “value-add real estate firms” and document whether Drake is mentioned	Premise (needed to measure AEO visibility improvement after schema deployment)	0.5 hours
3.4	Add sameAs links to LinkedIn company page and any other social profiles in Organization schema	Schema Review §1 (sameAs array placeholder in code example, needed for entity confirmation)	0.5 hours
3.5	Create one long-form content piece (1200+ words) on “How to evaluate value-add real estate opportunities” or similar investor-education topic, deploy on new blog or resources page with proper H1/H2 structure and at least 3 outbound links to authoritative sources	Technical Audit (thin content flag, AEO authority signal weak, need citation-worthy content)	8 hours

Subtotal: ~11 hours.

SUCCESS SIGNAL

At end of month 3: - Google Search Console shows at least 5 pages indexed with valid canonical tags - Baseline AEO citation test is documented and repeatable for quarterly tracking - One long-form content piece is live and includes at least 3 links to .edu, .gov, or industry association domains

---

Long-horizon view (months 4–6, not scheduled here)

- **Month 4:** Deploy BreadcrumbList schema sitewide, add 2-3 case studies with structured data for specific properties or investment outcomes
- **Month 5:** Build dedicated "Our Team" page with Person schema for each partner, create second FAQ page focused on LP questions
- **Month 6:** Conduct second AEO citation audit, measure change in Google Knowledge Panel presence, add HowTo schema for investor onboarding process

---

The single most important action

If the client only has time to do ONE thing in the next 7 days, it's this:

**Deploy Organization schema on the homepage using the JSON-LD code block from Schema Review §1. This is the root entity signal that makes every other fix count. Without it, you are invisible to AI engines. With it, you become a citable entity. Copy-paste into your
tag, replace the logo URL and LinkedIn URL with your actual values, and validate at search.google.com/test/rich-results. Total time: 30 minutes.**

Expected outcomes by the end of the 90 days

Realistic case: - Drake Real Estate Partners is recognized as a structured entity by Google (Knowledge Panel candidate) - LinkedIn shares of drakerep.com render with logo and title - At least one FAQ answer is eligible for Google answer box inclusion - Baseline AEO citation presence is documented for quarterly tracking

Optimistic case: - Google displays rich results (FAQ snippets or sitelinks search box) for branded queries - ChatGPT or Perplexity cites Drake by name when asked about New York value-add real estate firms - Homepage word count exceeds 800 words with clear service descriptions and investment thesis - Search Console shows zero canonical errors and 10+ pages indexed

Conservative case: - Organization and WebSite schema validate with zero errors in Rich Results Test - Social preview cards render correctly on at least two platforms (LinkedIn, Slack) - Homepage has proper H1, 400+ words, and all images have alt text - One FAQ page is live and crawlable
