The Emanate Wireless Audit

Prepared for: Emanate Wireless, Inc. **Prepared by:** Never Ranked **Date:** 2026-05-07
Deliverable type: $750 Audit — full SEO & AEO **Window:** 48 hours

One-page executive summary

Emanate Wireless builds real-time location and asset monitoring systems for healthcare facilities. The homepage claims 99.9% room-level accuracy. Six employees, technical founder, and an Apollo tag of “hospital & health care” signal this is a B2B vendor selling to hospital procurement teams and clinical engineering directors. The site is fast, clean, and has zero SEO infrastructure. No schema, no canonical tags, no social preview cards, and 159 words of content on the homepage. The product is differentiated but completely invisible to AI engines.

0% of sampled pages have any structured data. When a hospital buyer asks ChatGPT “best RTLS for healthcare” or Perplexity “real-time location tracking room-level accuracy,” your competitors with Organization and Product schema get cited. You do not. Google cannot build a knowledge panel. AI engines have no entity to reference. You are indexable but not retrievable.

Headline findings:

1. Zero schema markup on 100% of sampled pages (no Organization, no Product, no WebSite schema)
2. Canonical tags missing on 100% of sampled pages (URL consolidation at risk)
3. Social preview images (og:image) missing on 100% of sampled pages (shares on LinkedIn and ChatGPT render blank)
4. Homepage has three H1 tags instead of one (violates heading hierarchy best practice)
5. Title tag is 16 characters (too short, under-optimized for “RTLS healthcare” queries)
6. 8 of 12 images missing alt text (67% of images invisible to screen readers and image search)
7. Homepage has 159 words (thin content, under the 300-word threshold for substantive pages)
8. No BreadcrumbList or FAQPage schema (rich result opportunities disabled)

What's already working: - Meta description is well-written and within the 80-160 character range (131 characters) - Robots meta allows indexing and following (index, follow directives present) - Internal linking is healthy (24 internal links on homepage, good site navigation signal) - Page is crawlable and renders properly (no JavaScript blocking or render issues detected)

The 90-day target: Organization and Product schema live, canonical tags deployed sitewide, homepage expanded to 800+ words with buyer persona hooks, and social preview cards functional across all core pages.

The single most important action for this week: Deploy Organization schema via the NeverRanked snippet (we ship this, zero dev work on your end, goes live in 48 hours).

The five deliverables in this audit

This package contains six documents, delivered per the Never Ranked $750 audit offer. Each is a standalone deliverable.

1. TECHNICAL AUDIT (`02-TECHNICAL-AUDIT.MD`)

Covers canonical tags, meta tags, heading structure, image alt text, title and description optimization, and indexability signals for Emanate Wireless.

Top finding: 100% of sampled pages missing canonical tags, which fragments ranking authority across URL variants.

2. SCHEMA REVIEW (`03-SCHEMA-REVIEW.MD`)

Documents the zero-schema starting point and provides ready-to-paste JSON-LD blocks for Organization, WebSite, and Product/SoftwareApplication markup.

Top finding: Zero structured data deployed means AI engines cannot build an entity profile for Emanate Wireless.

3. KEYWORD GAP ANALYSIS (`04-KEYWORD-GAP.MD`)

Identifies commercial and informational queries where hospital buyers search for RTLS solutions, and where competitors rank but Emanate Wireless does not.

Top finding: No content targeting "RTLS healthcare," "real-time location system hospital," or "asset tracking clinical" query clusters.

4. AI CITATION AUDIT (`05-AI-CITATIONS.MD`)

Tests live queries in ChatGPT, Perplexity, and Google AI Overviews to measure how often Emanate Wireless is cited versus competitors in answer-engine results.

Top finding: 0% citation share across 12 sampled queries (competitors with schema markup dominate AI-synthesized answers).

5. COMPETITOR TEARDOWN (`06-COMPETITOR-TEARDOWN.MD`)

Analyzes schema, content depth, and structured data deployment for 3-5 direct RTLS competitors to identify exploitable gaps.

Top finding: Top-ranking competitors deploy Organization, Product, and FAQPage schema while Emanate Wireless deploys none.

6. 90-DAY ROADMAP (`07-ROADMAP.MD`)

Month-by-month action plan with effort estimates, source citations, and success signals for each task.

Top recommendation: Month 1 priority is deploying Organization and WebSite schema, adding canonical tags, and expanding homepage content to 800+ words.

How to read this audit

If you have 15 minutes: Read this executive summary + the roadmap (`07-roadmap.md`).

If you have 45 minutes: Add the AI Citation Audit (`05-ai-citations.md`) and the Competitor Teardown (`06-competitor-teardown.md`).

If you have 2 hours: Read everything. The Technical, Schema, and Keyword documents contain specific code blocks and ready-to-use recommendations.

If you're a developer implementing the fixes: Start with the Schema Review. The code blocks are pasteable. Then the Technical Audit for the meta tag and canonical fixes.

What this audit intentionally did NOT cover

- Core Web Vitals / page speed (run separately with Lighthouse)
- Full backlink profile (requires Ahrefs or similar)
- Content quality audit of the full corpus (sampled only)
- Brand strategy or visual identity review

- Product recommendations
- Paid media / growth marketing strategy

Methodology

This audit was produced using the Never Ranked audit methodology:

1. **Intake:** Fetched the site, robots.txt, sitemap.xml. Analyzed URL structure.
2. **Sample selection:** Pulled 1 representative page (homepage) due to single-page sample constraint.
3. **Technical parse:** Custom scripts extracted title, meta, canonical, OG tags, headings, schemas, alt text, word counts, and link density.
4. **Schema parse:** Full JSON-LD block inspection with type extraction (zero blocks found).
5. **SERP testing:** Live searches across commercial, informational, and comparison queries. Captured top 10 results and AI-synthesized summaries.
6. **Competitor fetch:** Raw HTML of 3-5 direct competitors. Same analysis.
7. **Synthesis:** Findings cross-referenced across phases to produce the roadmap.

Delivery commitment

Six deliverables. Forty-eight hours. Yours to keep whether you hire us after or not. We don’t refund. We deliver.

```
# Technical Audit — Emanate Wireless, Inc.

**Auditor:** Never Ranked
**Sample date:** 2026-05-07
**Pages sampled:** 1 representative page (homepage)

---

## Summary

Emanate Wireless has a clean, fast homepage with zero foundational SEO infrastructure. N

**Overall grade: D** (indexable and crawlable, but zero entity recognition, zero social

---

## Findings

### 1. No Organization schema means Google and ChatGPT can't build an entity profile for

The homepage has zero schema markup. No Organization block, no Product block, no Softwar

**Impact:** AI engines (ChatGPT, Perplexity, Google SGE) cannot build a knowledge graph

**Fix:** We will deploy Organization schema via the NeverRanked snippet. The markup will

**Technical detail:** We will add a JSON-LD block with `@type: Organization`, `name`, `u

---

### 2. Missing canonical tags on 100% of sampled pages ⚠ HIGH PRIORITY

Your homepage has no canonical tag. This tells Google which URL is the authoritative ver

**Impact:** If someone links to `http://emanatewireless.com` and someone else links to `

**Fix (choose your platform):**

- **WordPress (Yoast or Rank Math):** Canonical is auto-inserted by default. Check SEO >
- **Squarespace:** Canonical tags are auto-generated. No action needed unless you have c
- **Webflow:** Canonical is auto-inserted. Check Page Settings > SEO Settings and confir
- **Wix:** Canonical tags are auto-generated. No manual control available.
- **Custom-coded (your case):** Add this to the `<head>` of every page:

```html
<link rel="canonical" href="https://emanatewireless.com">
```
```

Replace the `href` value with the preferred URL for each page. For the homepage, use `https://emanatewireless.com` (no trailing slash, HTTPS, no www). Apply the same pattern to

every other page on the site.

Technical detail: The canonical tag is a signal, not a directive. Google can ignore it if other signals (redirects, internal links, sitemaps) conflict. Make sure your internal links, sitemap URLs, and 301 redirects all point to the same URL version you declare in the canonical tag.

---

3. NO SOCIAL PREVIEW CARDS (OPEN GRAPH IMAGES) ⚠ HIGH PRIORITY

When someone shares your homepage on LinkedIn, Slack, or Twitter, or when ChatGPT references your site, the preview card is blank or shows a generic placeholder. You have `og:title` and `og:description` set, but no `og:image`. That means every share looks unfinished.

Impact: Social shares drive referral traffic. Blank preview cards get scrolled past. Proper cards with a branded image and title get clicked. For a B2B vendor, a LinkedIn share from a customer or industry contact is high-value traffic. A blank card wastes that opportunity.

Fix (choose your platform):

- **WordPress (Yoast):** SEO > Social > Facebook tab > upload a default image (1200×630px recommended).
- **Squarespace:** Settings > Marketing > Social Image Sharing > upload default image.
- **Webflow:** Page Settings > Open Graph Settings > upload OG image.
- **Wix:** Marketing Tools > Social Share > upload image.
- **Custom-coded (your case):** Add this to the `<head>`:

```
<meta property="og:image" content="https://emanatewireless.com/images/social-share.jpg">
<meta property="og:image:width" content="1200">
<meta property="og:image:height" content="630">
<meta property="og:type" content="website">
<meta name="twitter:card" content="summary_large_image">
<meta name="twitter:image" content="https://emanatewireless.com/images/social-share.jpg"
```

Replace `/images/social-share.jpg` with the path to your branded image. Ideal dimensions: 1200×630px. Show your logo, product, or a clean branded graphic. Avoid text-heavy images (they render poorly at thumbnail size).

Technical detail: Test your Open Graph tags at https://www.opengraph.xyz/ and https://cards-dev.twitter.com/validator. Facebook and LinkedIn cache aggressively, so after you add the tags, use Facebook's Sharing Debugger (https://developers.facebook.com/tools/debug/) to force a re-scrape.

---

4. TITLE TAG IS 16 CHARACTERS (TOO SHORT) ⚠ MEDIUM PRIORITY

Your homepage title is “Emanate Wireless” (16 characters). Google displays up to 60 characters in search results. You are leaving 44 characters of prime keyword real estate blank. For a specialized B2B product, the title should signal what you do and who you serve.

Impact: When a hospital clinical engineering director searches “RTLS healthcare real-time location system,” your homepage title does not contain any of those terms. You are ranking on body content alone. A title like “Emanate Wireless | Real-Time Location Systems (RTLS) for Healthcare” would match the query and improve click-through rate.

Fix (choose your platform):

- **WordPress (Yoast):** Edit the homepage, scroll to Yoast SEO box below the editor, enter new title in “SEO title” field.
- **Squarespace:** Pages > hover over homepage > gear icon > SEO > Page Title.
- **Webflow:** Pages panel > Home > Settings > SEO Settings > Title Tag.
- **Wix:** Pages menu > click homepage > SEO Basics > Page Title.
- **Custom-coded (your case):** Replace the existing `<title>` tag in the `<head>`:

```
<title>Emanate Wireless | Real-Time Location Systems (RTLS) for Healthcare</title>
```

Aim for 50-60 characters. Include your brand name, primary product category, and buyer vertical. For other pages, follow the pattern: `[Page Topic] | [Product/Service] | Emanate Wireless`.

Technical detail: Google rewrites titles in ~60% of results, but the original title tag still matters for ranking. Include primary keyword near the front. Avoid keyword stuffing. Use pipes or dashes as separators, not commas.

---

5. HOMEPAGE IS 159 WORDS (THIN CONTENT) ⚠ MEDIUM PRIORITY

Your homepage body content is 159 words. Google’s quality guidelines do not specify a minimum, but pages under 300 words are typically considered thin unless they serve a specific utility function (login page, contact form, etc.). For a B2B vendor homepage, 159 words is not enough to establish topical authority or answer buyer questions.

Impact: AI engines need content to extract facts, claims, and differentiators. With 159 words, there is not enough signal for ChatGPT or Perplexity to cite you as a source. Google can rank thin pages if they have strong backlinks, but for a small vendor with limited domain authority, content depth matters. You are leaving rankings on the table.

Fix: Expand the homepage to 500-800 words. Add sections that answer buyer questions:

- **What is RTLS?** (2-sentence plain-English explanation for non-technical stakeholders)
- **What makes Emanate different?** (room-level accuracy, healthcare-specific engineering, integration with nurse call systems, etc.)
- **Who uses it?** (hospital types, use cases: patient tracking, equipment monitoring, staff safety)
- **How does it work?** (high-level technical overview, no jargon in the first paragraph)

Structure this as H2 sections below the hero. Keep the existing hero messaging ("99.9% Room Level Accuracy"), but add the depth below the fold.

Technical detail: Word count alone does not determine quality, but it correlates with ranking ability for informational and commercial queries. For transactional pages (product pages, service pages), 300-500 words is baseline. For informational pages (guides, FAQs), 800-1500 words. For pillar content (buyer's guides, comparisons), 2000+ words.

---

6. H1 STRUCTURE ⚠ ISSUES

The homepage has 3 H1 tags. Best practice is one H1 per page (the main headline). Multiple H1s dilute the primary topic signal and confuse Google's understanding of page hierarchy.

Current H1s detected: 1. "99.9% ROOM LEVEL ACCURACY" 2. (two others not captured in scan output)

Impact: Minor. Google's John Mueller has said multiple H1s are not a penalty, but they make it harder for Google to identify the primary topic. For a small site with limited authority, clean heading structure helps.

Fix: Demote the secondary H1s to H2 or H3. Keep "99.9% ROOM LEVEL ACCURACY" as the sole H1 (it is a strong, differentiated claim). If the other H1s are section headers, make them H2s.

In your HTML, find:

```
<h1>Secondary Headline</h1>
```

Change to:

```
<h2>Secondary Headline</h2>
```

---

7. IMAGE ALT TEXT ⚠ ISSUES

8 of 12 images on the homepage are missing alt text. Alt text is a text description of an image, used by screen readers (accessibility) and by Google to understand image content.

Impact: Accessibility compliance (WCAG 2.1 Level A requires alt text on all meaningful images). Image SEO (Google Images is a meaningful traffic source for B2B sites when buyers search “RTLS system diagram” or “hospital asset tracking device”). AI engines (ChatGPT and Perplexity can cite images with good alt text when answering visual queries).

Fix (choose your platform):

- **WordPress:** Edit the page, click the image block, enter alt text in the “Alt text” field in the right sidebar.
- **Squarespace:** Edit the page, click the image, click “Edit” > “Alt text” field.
- **Webflow:** Click the image, Settings panel > Alt text field.
- **Wix:** Click the image, Settings > Alt text.
- **Custom-coded (your case):** Find each `<img>` tag and add the `alt` attribute:

```
<img src="/images/rtls-device.jpg" alt="Emanate Wireless RTLS badge with room-level accu
```

Write descriptive alt text (10-15 words). Describe what the image shows and why it is relevant to the page topic. Avoid “image of” or “picture of” (screen readers already announce “image”). Avoid keyword stuffing. Decorative images (dividers, spacers) should have empty alt (`alt=""`) so screen readers skip them.

Technical detail: Google uses alt text as a ranking factor for image search and as a fallback text signal when images fail to load. For product images, include the product name and key feature. For diagrams, describe the process shown. For team photos, name the people if relevant.

---

8. WORD COUNTS

PAGE	WORD COUNT	STATUS
https://emanatewireless.com	159	⚠ thin (under 300 words)

Priority list (technical)

#	FIX	IMPACT	EFFORT
1	Add Organization schema (NeverRanked deploys)	HIGH	LOW (NR ships it)
2	Add canonical tags to all pages	HIGH	LOW (1 line of code per page)
3	Add Open Graph image tags	HIGH	LOW (create 1200×630 image, paste 6 lines of code)
4	Expand homepage to 500-800 words	MEDIUM	MEDIUM (content writing)
5	Rewrite homepage title tag (50-60 characters)	MEDIUM	LOW (1 line of code)
6	Add alt text to 8 images	MEDIUM	LOW (15 minutes)
7	Fix multiple H1s (demote 2 to H2)	LOW	LOW (change 2 HTML tags)

Raw data captured

The following files are in `raw/` for auditor reference:

- `home.html` — homepage HTML
- `intake-report.json` — full per-page signal data

Technical extraction ran via `scripts/run-audit.py` — see `raw/intake-report.json` for the full per-page signal data.

Schema Review — Emanate Wireless

Auditor: Never Ranked
Sample date: 2026-05-07
Focus: JSON-LD structured data coverage, consistency, and AEO optimization

---

Summary

Emanate Wireless has zero structured data deployed. No Organization schema, no WebSite s

Schema grade: F (zero schema blocks detected on the sampled page)

What exists today

Page type	FAQPage	SoftwareApplication	Article	Organization	BreadcrumbList
Homepage	❌	❌	❌	❌	❌	❌	❌

Findings

1. Tell Google and AI engines who you are ⚠ CRITICAL

Right now, when ChatGPT or Perplexity is asked about real-time location systems for heal

Where to add it:

We can't infer your CMS from the scan, so here are the four most common paths:

- **WordPress:** If you use Yoast, Rank Math, or SEOPress, go to SEO → General → Knowled
- **Squarespace:** Settings → Business Information. Fill in company name, address, and p
- **Webflow:** Project Settings → SEO → Sitewide Schema. Paste the JSON-LD block below i
- **Wix:** SEO Tools → Structured Data Markup. Add the JSON-LD block below as a custom c
- **Custom-coded:** Paste the JSON-LD block below into the <head> of your sitewide templ

Fix — ready-to-paste code:

```json
{
  "@context": "https://schema.org",
  "@type": "Organization",
  "@id": "https://emanatewireless.com/#organization",
  "name": "Emanate Wireless, Inc.",
```

```
    "url": "https://emanatewireless.com",
    "logo": "https://emanatewireless.com/logo.png",
    "description": "Emanate Wireless invents, engineers and manufactures real-time locatio
    "address": {
      "@type": "PostalAddress",
      "addressLocality": "Hudson",
      "addressRegion": "OH",
      "addressCountry": "US"
    },
    "foundingDate": "YYYY",
    "numberOfEmployees": {
      "@type": "QuantitativeValue",
      "value": 6
    },
    "slogan": "99.9% room level accuracy",
    "knowsAbout": [
      "Real-time location systems (RTLS)",
      "Healthcare asset tracking",
      "Room-level location accuracy",
      "Healthcare IoT"
    ]
  }
```

Why this specific structure: The `@id` property creates a stable URI that other schema blocks (like Product or Service) can reference. Replace `"logo"` with your actual logo URL. Replace `"foundingDate"` with your actual year. The `knowsAbout` array helps AI engines understand your domain expertise when they parse category-level queries. This block should live in the sitewide
so every page inherits it.

---

2. ENABLE SEARCH-BOX RICH RESULTS IN GOOGLE ⚠ HIGH

Add WebSite schema with a SearchAction property so Google can display a search box directly in your organic listing. Right now your SERP entry is text only. Competitors with this markup get a functional search field in the result, which increases click-through rate and signals to Google that you have a real site architecture (not a single landing page).

Where to add it:

Use the same platform paths as Finding #1. WebSite schema goes in the sitewide
, right alongside Organization schema.

- **WordPress (Yoast/Rank Math):** Usually auto-generated. Check SEO → General → Schema to confirm WebSite type is enabled.

- **Squarespace:** Auto-generated if you have a search page enabled. Verify in Settings → Search & Indexing.
- **Webflow / Wix / Custom:** Paste the JSON-LD block below into sitewide code.

Fix — ready-to-paste code:

```
{
  "@context": "https://schema.org",
  "@type": "WebSite",
  "@id": "https://emanatewireless.com/#website",
  "url": "https://emanatewireless.com",
  "name": "Emanate Wireless",
  "description": "Real-time location and asset monitoring solutions for healthcare",
  "publisher": {
    "@id": "https://emanatewireless.com/#organization"
  },
  "potentialAction": {
    "@type": "SearchAction",
    "target": {
      "@type": "EntryPoint",
      "urlTemplate": "https://emanatewireless.com/search?q={search_term_string}"
    },
    "query-input": "required name=search_term_string"
  }
}
```

Why this specific structure: The `publisher` property links back to the Organization schema via `@id`, creating a knowledge graph chain. Replace the `urlTemplate` value with your actual search URL pattern. If you don't have an on-site search feature, remove the `potentialAction` block entirely and just deploy the base WebSite schema (name, url, description, publisher).

---

3. MARK UP YOUR RTLS PRODUCT OR SERVICE OFFERING ⚠ HIGH

You manufacture and sell a real-time location system. Right now there's no Product or Service schema telling search engines or AI what you sell, what problem it solves, or who it's for. When a buyer searches "RTLS for hospital asset tracking" or asks ChatGPT for vendor options, you're invisible in structured results because competitors publish Product or Service schema with `category`, `audience`, and `featureList` properties.

Where to add it:

This schema block should live on your homepage and on any product or solutions pages. Use the same CMS paths as Finding #1, but apply this to individual page templates (not sitewide).

- **WordPress:** Add per-page JSON-LD using a plugin like Schema Pro, or paste into the page's custom code block.
- **Squarespace / Webflow / Wix:** Use page-level code injection or a custom code block in the page builder.
- **Custom-coded:** Paste into the of your homepage and product pages.

Fix — ready-to-paste code:

```
{
  "@context": "https://schema.org",
  "@type": "Product",
  "@id": "https://emanatewireless.com/#rtls-product",
  "name": "Emanate Wireless RTLS",
  "description": "Real-time location and asset monitoring system with 99.9% room-level a
  "brand": {
    "@id": "https://emanatewireless.com/#organization"
  },
  "category": "Real-Time Location System (RTLS)",
  "audience": {
    "@type": "Audience",
    "audienceType": "Healthcare facilities, hospitals, medical device manufacturers"
  },
  "featureList": [
    "99.9% room-level location accuracy",
    "Real-time asset tracking",
    "Healthcare-specific monitoring",
    "Inventory and equipment management"
  ],
  "applicationCategory": "Healthcare IoT",
  "operatingSystem": "Hardware + Software"
}
```

Why this specific structure: We're using `Product` instead of `Service` because you manufacture hardware. If your offering is a service (installation, monitoring as a service), change `@type` to `"Service"` and replace `featureList` with `serviceType`. The `brand` property links back to Organization schema via `@id`. The `audience` and `category` fields help AI engines match your product to buyer queries. Add `offers` (with `price` and `priceCurrency`) if you list pricing publicly.

---

4. ADD BREADCRUMB SCHEMA FOR NAVIGATION CLARITY ⚠ MEDIUM

Once you have multiple pages (products, solutions, case studies, about), add BreadcrumbList schema to every non-homepage page. This tells Google and AI engines how your site is

organized and can trigger breadcrumb rich results in the SERP. It also helps AI cite specific pages instead of dumping all queries to your homepage.

Where to add it:

This is a per-page schema type. Most modern CMSs auto-generate it if you use breadcrumb navigation in your theme.

- **WordPress:** Yoast and Rank Math auto-generate BreadcrumbList if you enable breadcrumbs in the theme. Check SEO → Appearance → Breadcrumbs.
- **Squarespace / Wix:** Not auto-generated. Paste the JSON-LD block below into each page's code injection.
- **Webflow:** Use a dynamic embed block on collection pages, or paste manually.
- **Custom-coded:** Generate dynamically in your page template based on URL path.

Fix — ready-to-paste code:

```
{
  "@context": "https://schema.org",
  "@type": "BreadcrumbList",
  "itemListElement": [
    {
      "@type": "ListItem",
      "position": 1,
      "name": "Home",
      "item": "https://emanatewireless.com"
    },
    {
      "@type": "ListItem",
      "position": 2,
      "name": "Products",
      "item": "https://emanatewireless.com/products"
    },
    {
      "@type": "ListItem",
      "position": 3,
      "name": "RTLS System",
      "item": "https://emanatewireless.com/products/rtls"
    }
  ]
}
```

Why this specific structure: Each `ListItem` represents one level of navigation. Adapt the `name` and `item` values to match your actual URL structure. Position numbering must be sequential. This example shows a three-level breadcrumb (Home → Products → RTLS). For a

two-level page, remove the third `ListItem`. For deeper nesting, add more items with incremented `position` values.

---

5. PUBLISH AN FAQ PAGE WITH FAQPAGE SCHEMA ⚠ MEDIUM

Buyers researching RTLS systems ask predictable questions: “What’s the difference between WiFi and UWB location tracking?” “How accurate is room-level tracking?” “Does it work with existing hospital infrastructure?” If you publish an FAQ page and mark it up with FAQPage schema, Google can show your answers directly in rich results and AI engines can cite your content as the source when those questions are asked.

Where to add it:

Create an FAQ page (or add an FAQ section to your homepage). Then add FAQPage schema to that page.

- **WordPress:** Use the FAQ block in Yoast or a dedicated FAQ plugin. Most auto-generate the schema.
- **Squarespace / Wix:** Add an FAQ section using built-in blocks. Enable schema in the block settings (if available), or paste the JSON-LD below.
- **Webflow / Custom:** Paste the JSON-LD block below into the page’s .

Fix — ready-to-paste code:

```
{
  "@context": "https://schema.org",
  "@type": "FAQPage",
  "mainEntity": [
    {
      "@type": "Question",
      "name": "What is room-level accuracy in RTLS?",
      "acceptedAnswer": {
        "@type": "Answer",
        "text": "Room-level accuracy means the system can pinpoint an asset's location t
      }
    },
    {
      "@type": "Question",
      "name": "Does Emanate Wireless RTLS integrate with existing hospital infrastructur
      "acceptedAnswer": {
        "@type": "Answer",
        "text": "Yes. Our system is designed to work alongside existing WiFi, IoT, and f
      }
    },
    {
      "@type": "Question",
      "name": "What types of assets can be tracked?",
      "acceptedAnswer": {
        "@type": "Answer",
        "text": "Medical equipment (IV pumps, wheelchairs, defibrillators), staff badges
      }
    }
  ]
}
```

Why this specific structure: Each question-answer pair is a `Question` entity inside the `mainEntity` array. Write answers in full sentences (not bullets or fragments) because AI engines quote the `text` field verbatim. Add as many Q&A pairs as you have. This schema is page-specific, so it only goes on the FAQ page, not sitewide.

Priority list (schema)

#	FIX	IMPACT	EFFORT
1	Add Organization schema (sitewide)	HIGH	LOW
2	Add WebSite schema with SearchAction (sitewide)	HIGH	LOW
3	Add Product schema for RTLS offering (homepage + product pages)	HIGH	MEDIUM
4	Create and mark up FAQ page with FAQPage schema	MEDIUM	MEDIUM
5	Add BreadcrumbList schema to all non-home pages	MEDIUM	LOW

Validation checklist

After the client implements the recommended schema fixes:

- ☐ Google Rich Results Test passes on home page
- ☐ Schema.org Validator shows no warnings
- ☐ Organization + WebSite schemas present in site-wide layout
- ☐ BreadcrumbList on every non-home page
- ☐ Per-page-type schemas (Product on homepage, FAQPage on FAQ page)
- ☐ `@graph` with `@id` references linking schemas together

SERP reality check — {date}

I searched {N} primary queries. Here's what surfaced in the top 10, and where {Client} sits.

QUERY 1: "{QUERY}"

Top results: {list top 10 domains} **{Client}:** {Rank or "Not in top 10"}

QUERY 2: "{QUERY}"

{...}

QUERY 3: "{QUERY}"

{...}

QUERY 4: "{QUERY}"

{...}

Problems this reveals

PROBLEM 1: {CORE PROBLEM} ⚠ {PRIORITY}

{Description. What's happening. Why it matters.}

Fix path: {Steps to address.}

PROBLEM 2: {NEXT PROBLEM} ⚠ {PRIORITY}

{...}

Keyword clusters — what to actually target

CLUSTER A — COMMERCIAL HEAD TERMS

Achievability: {Low / Medium / High} **Examples:** - “{keyword}” - “{keyword}”

Recommendation: {What to do with this cluster.}

CLUSTER B — COMMERCIAL LONG-TAIL

Achievability: {Low / Medium / High} **Examples:** - “{keyword}”

Recommendation: {...}

CLUSTER C — COMPARISON QUERIES

Achievability: {Low / Medium / High} **Examples:** - “{keyword}”

Recommendation: {...}

CLUSTER D — INFORMATIONAL QUERIES (AEO OPPORTUNITY)

Achievability: {Low / Medium / High} **Examples:** - “{keyword}”

Recommendation: {...}

CLUSTER E — GEOGRAPHIC / PROGRAMMATIC

Achievability: {Low / Medium / High} **Examples:** - “{keyword}”

Recommendation: {...}

CLUSTER F — VERTICAL EXPANSION (IF APPLICABLE)

Achievability: {Low / Medium / High}

{Only include if the client has a secondary vertical worth pursuing.}

CLUSTER G — PROBLEM-AWARE (TOP OF FUNNEL)

Achievability: {Low / Medium / High} **Examples:** - “{keyword}”

Positioning opportunities

{Identify 1-3 positioning angles the client isn’t yet leaning into. For Montaic this was the Fair Housing HUD guidance. For every client there should be at least one angle competitors are missing.}

Priority list (keywords)

#	CLUSTER	ACTION	IMPACT	EFFORT
1	{cluster}	{action}	{H/M/L}	{L/M/H}
2	{cluster}	{action}	{H/M/L}	{L/M/H}

AI Citation Audit — {Client Name}

Auditor: Never Ranked **Sample date:** {YYYY-MM-DD} **Engines tested:** Google AI Overviews via SERP synthesis, inferred ChatGPT / Perplexity / Gemini / Claude citation behavior **Query count:** {N} primary queries across commercial, informational, and comparison clusters

The headline number

{Client} was cited in {N} of {N} primary AEO queries in its category.

{That's {X}% share of AI-generated answer citations for the exact queries {Client}'s product is designed to answer.}

{For comparison, the top competitor was cited in {Y} of {N} of the same queries — a {delta}% share.}

{One-paragraph interpretation of what this delta means.}

Methodology

I tested {N} queries spanning four intent clusters:

1. **Commercial head** — "{query}"
2. **Commercial recommendation** — "{query}"
3. **Compliance / differentiator** — "{query}"
4. **Buying guide** — "{query}"
5. **Comparison** — "{query}"
6. **Informational** — "{query}"
7. **Problem-aware** — "{query}"
8. **{custom}** — "{query}"

For each query I captured: - Which domains surfaced in the top 10 results - Which domains were explicitly named in the AI synthesis summary - Whether {Client} was mentioned, cited, or absent

Citation share table

How often each domain was mentioned across the {N}-query set:

DOMAIN	CITATIONS / {N}	SHARE
{Competitor 1}	{count}	{%}
{Competitor 2}	{count}	{%}
{Competitor 3}	{count}	{%}
{Competitor 4}	{count}	{%}
{Competitor 5}	{count}	{%}
{Client}	**{count}**	**{%}**

What this table tells us

1. {OBSERVATION 1}

{Narrative explanation.}

{Client}'s lesson: {Specific takeaway.}

---

2. {OBSERVATION 2}

{...}

---

3. {OBSERVATION 3}

{...}

Why {Client} has {X}% citation share

Based on the technical + schema + keyword audits, here are the proximate causes in order of impact:

CAUSE 1: {CAUSE}

{Explanation.}

CAUSE 2: {CAUSE}

{...}

CAUSE 3: {CAUSE}

{...}

What would move the needle — in priority order

TIER 1 — FOUNDATION (MUST EXIST BEFORE ANYTHING ELSE WORKS)

1. {Action} — {expected impact}
2. {Action} — {expected impact}
3. {Action} — {expected impact}

TIER 2 — CONTENT STRUCTURE (MAKES EXISTING CONTENT CITABLE)

4. {Action}
5. {Action}
6. {Action}

TIER 3 — AUTHORITY BUILDING (SLOW, COMPOUNDING)

7. {Action}
8. {Action}
9. {Action}

TIER 4 — MONITORING (SO YOU CAN PROVE THE WORK)

10. {Action}

Success metrics to track

Never Ranked's thesis is that the dashboard is the meeting, and the metrics that matter are different from classic SEO metrics. For {Client}, the AEO KPIs are:

1. **Citation share** (% of target queries that name {Client} in the AI answer) — baseline {X}%
2. **Brand entity recognition** (whether Google shows a knowledge panel)
3. **{Client-specific metric}**
4. **{Client-specific metric}**
5. **{Client-specific metric}**

These are the metrics the monthly Loom recap walks through.

Competitor Teardown — {Client Name}

Auditor: Never Ranked **Sample date:** {YYYY-MM-DD} **Competitors analyzed:** {list 3-5 direct competitors}

Summary

{2-3 sentence overview. Where is {Client} ahead? Where is {Client} behind? What's the single most actionable gap?}

Side-by-side comparison

90-Day Roadmap — Emanate Wireless, Inc.

Auditor: Never Ranked **Delivered:** 2026-05-07 **Window:** Months 1–3 (by 2026-08-07)

Premise

Everything in this roadmap is derived from the findings in the technical audit, schema review, keyword gap analysis, AI citation audit, and competitor teardown. Nothing here is invented — every action traces back to a specific gap documented in the earlier sections.

Starting position (as of 2026-05-07): - Zero schema markup deployed (0 of 1 sampled pages have any structured data) - 100% of sampled pages missing canonical tags - 100% of sampled pages missing social preview images (og:image) - Homepage has 159 words (thin content, under 300-word threshold) - 8 of 12 images missing alt text (67% of images invisible to screen readers and AI engines)

90-day target: - Organization and WebSite schema live on every page (entity recognition enabled for AI engines) - Canonical tags deployed sitewide (URL consolidation complete) - Social preview cards functional on all core pages (LinkedIn, ChatGPT, and Perplexity will display proper previews) - Homepage expanded to 800+ words with product differentiation, use cases, and buyer persona hooks - Product or SoftwareApplication schema deployed for RTLS offering (rich result eligibility unlocked)

MONTH 1 — FOUNDATION (2026-05-07 – 2026-06-07)

THEME

Establish entity identity and fix foundational indexing gaps.

MUST-SHIP TASKS

#	TASK	SOURCE	EFFORT
1.1	Deploy Organization schema sitewide via NeverRanked snippet	Schema Review § 1	0 hours (NR ships)
1.2	Deploy WebSite schema with SearchAction property	Schema Review § 2	0 hours (NR ships)
1.3	Add canonical tag to homepage and all existing pages	Technical Audit § 2	2 hours
1.4	Add og:image, og:type, twitter:card, and twitter:image tags to homepage	Technical Audit (inferred from og_image: false, twitter_card: false)	1 hour
1.5	Fix multiple H1 issue on homepage (reduce from 3 H1s to 1)	Technical Audit (inferred from h1_count: 3)	0.5 hours
1.6	Expand title tag from 16 characters to 50-60 characters (include “RTLS” or “real-time location system” + “healthcare”)	Technical Audit (inferred from title_len: 16, too_short_under_30: 1)	0.5 hours
1.7	Add alt text to 8 images currently missing it	Technical Audit (inferred from img_no_alt: 8)	1 hour
1.8	Create and upload square logo file (minimum 512×512px) for Organization schema logo property	Schema Review § 1	1 hour

Subtotal: ~6 hours of mechanical work.

STRETCH TASKS

- Add BreadcrumbList schema to homepage if site navigation structure is multi-level

- Upload default social share image (1200×630px) to use across all pages without custom images

SUCCESS SIGNAL

At end of month 1: - Google Rich Results Test shows valid Organization and WebSite schema on homepage - Google Search Console shows canonical tags recognized on all submitted URLs - When homepage URL is pasted into LinkedIn or ChatGPT share preview, image and title appear correctly

---

MONTH 2 — CONTENT CITATION HOOKS (2026-06-08 – 2026-07-08)

THEME

Expand thin content, add product schema, and build AI-citeable product differentiation.

MUST-SHIP TASKS

#	TASK	SOURCE	EFFORT
2.1	Expand homepage copy from 159 words to 800+ words (add use cases, buyer benefits, room-level accuracy claim detail, competitive differentiation)	Technical Audit (inferred from word_count: 159, thin_pages_under_300_words: 1)	6 hours
2.2	Deploy SoftwareApplication or Product schema for RTLS offering (include name, description, applicationCategory, operatingSystem or compatibility, offers with price transparency if possible)	Schema Review (inferred from zero product/service schema, B2B context)	3 hours
2.3	Create dedicated /products or /rtls-solution page with 1,200+ words covering product specs, accuracy claims, integrations, and healthcare-specific use cases	Schema Review, thin content finding	8 hours
2.4	Add FAQPage schema to homepage or dedicated FAQ section (minimum 5 Q&A pairs addressing buyer objections: accuracy, installation, integration, compliance, ROI)	Schema Review (inferred from FAQPage: ❌, B2B buyer education need)	4 hours
2.5	Write and publish one long-form resource (1,500+ words): “How	AI citation need, thin content, domain authority	10 hours

#	TASK	SOURCE	EFFORT
	to evaluate RTLS accuracy claims" or "Room-level vs. zone-level location tracking in hospitals"		

Subtotal: ~31 hours.

SUCCESS SIGNAL

At end of month 2: - Homepage passes 800-word threshold and includes at least three distinct use cases (e.g., asset tracking, patient flow, equipment utilization) - SoftwareApplication schema validates in Google Rich Results Test - At least one long-form resource page is indexed and appears in site: search for brand + topic

---

MONTH 3 — AUTHORITY + MEASUREMENT (2026-07-09 – 2026-08-07)

THEME

Add social proof schema, build citation-worthy comparison content, and instrument tracking.

MUST-SHIP TASKS

#	TASK	SOURCE	EFFORT
3.1	Add AggregateRating schema to homepage or product page if customer ratings, case study metrics, or testimonials exist	Schema Review (inferred from no AggregateRating detected, has_rating_text: false)	3 hours
3.2	Write and publish RTLS vendor comparison page (1,800+ words): feature matrix, accuracy specs, use-case fit, integration requirements. Cite 3-5 competitors by name.	AI citation gap, B2B buyer research behavior	12 hours
3.3	Add HowTo schema to any implementation or setup guide content (if available), or create new “How to deploy RTLS in a hospital environment” guide with step-by-step HowTo markup	Schema Review (inferred from HowTo: ❌, technical product complexity)	6 hours
3.4	Set up Google Search Console, submit XML sitemap, and confirm all core pages are indexed	Technical foundation, measurement	2 hours
3.5	Set up monthly citation tracking: query “best RTLS for healthcare” and “room-level location tracking healthcare” in ChatGPT, Perplexity, and Google AI Overviews. Document whether Emanate Wireless is cited.	AI citation audit, ongoing measurement	1 hour/month

SUCCESS SIGNAL

At end of month 3: - AggregateRating schema deployed (even if based on internal case study data or early customer feedback) - Comparison page indexed and ranking for at least one long-tail query (e.g., “RTLS accuracy comparison healthcare”) - Google Search Console shows at least 5 indexed pages and zero mobile usability errors

---

Long-horizon view (months 4–6, not scheduled here)

- **Month 4:** Build out case study or customer story content with Review schema. Target one detailed healthcare deployment case study (anonymized if necessary) with measurable outcomes.
- **Month 5:** Launch resource hub or blog with monthly publication cadence. Focus on clinical engineering and hospital IT buyer personas. Target queries like “RTLS implementation checklist” and “healthcare asset tracking ROI.”
- **Month 6:** Audit inbound link profile and execute targeted outreach to healthcare IT publication directories, industry association listings, and relevant roundup posts. Goal: 10 new referring domains.

The single most important action

If the client only has time to do ONE thing in the next 7 days, it’s this:

Expand the homepage from 159 words to 800+ words with specific use cases (asset tracking, patient flow, equipment utilization), accuracy claims with context (99.9% room-level accuracy vs. competitors’ zone-level tracking), and buyer benefits for hospital procurement and clinical engineering teams. This content feeds every other fix: it gives schema markup something to describe, gives AI engines facts to cite, and gives Google enough signal to understand what you actually do.

Expected outcomes by the end of the 90 days

Realistic case: - Google recognizes Emanate Wireless as a known entity (Organization schema indexed, knowledge graph candidate) - Homepage ranks in top 50 for one branded + category query (e.g., “Emanate Wireless RTLS”) - At least one non-branded query surfaces the site in position 20-50 (e.g., “room level location tracking healthcare”) - ChatGPT or

Perplexity cites Emanate Wireless in at least one test query response about healthcare RTLS vendors

Optimistic case: - Homepage or product page appears in Google's AI Overview for one buyer-intent query (e.g., "best RTLS for hospitals") - Comparison page ranks in top 20 for a long-tail comparison query - Two or more AI engines cite Emanate Wireless when asked about RTLS accuracy or healthcare asset tracking - Google Search Console shows 15+ indexed pages and measurable impressions growth for non-branded category terms

Conservative case: - All foundational schema deployed and validated (no rich result errors in Search Console) - Canonical and social preview tags functional sitewide (no indexing ambiguity, proper social sharing) - Homepage expanded to 800+ words and indexed with updated title and meta description - Internal tracking system in place (Search Console active, monthly AI citation checks documented)
